Thread: [\[Batch\] Process Starter and Killer by Hackoo](#)

Hackoo - June 17, 2015, 7:46 pm

Hi ?

Just i want to share with you this batch script with a dynamic menu

So in this batch there are 3 items to choice on the menu

[1] Start a Process or Multi Processes

[2] Kill a Process or Multi Processes

[3] Search for files

PHP Code

```
<?php
@Echo off & cls & color 0B
Mode con cols=72 lines=11
Set TmpFile=TmpFile.txt
Set Resultat=KillResult.txt
If Exist %TmpFile% Del %TmpFile%
If Exist %Resultat% Del %Resultat%
:menuLOOP
Mode con cols=72 lines=11
Cls & color 0B
Title Process Starter and Killer by Hackoo 2015
echo(
echo(  =====Menu=====
echo(
for /f "tokens=2* delims=_ " %%A in ("findstr /b /c:".menu_ " "%~f0"") do echo(          %%A %%
B
echo(
echo(  =====
set choice=
echo( & set /p choice=Make a choice or hit ENTER to quit: || GOTO :EOF
echo( & call :menu_[%choice%]
GOTO:menuLOOP
:*****
:menu_[1] Start a Process or Multi Processes
cls & color 0A
echo(
echo  Enter the process name or processes names separated by a space
echo(
Set /p "MyProcess=What process(es) do you want to Start ?>"
cls
echo(
echo  The process(es) "%MyProcess%" is launched ...
Timeout /T 1 /NoBreak>nul
For %%a in (%Myprocess%) Do (Start %%a)
```

```

GOTO :menuLOOP
..*****
:menu_[2] Kill a Process or Multi Processes
Title Process Killer by Hackoo 2015
cls & color 0B
echo(
echo    Enter the process name or processes names separated by a space
echo(
set /p "process=What process(es) do you want to kill ?>"
cls & color 0C
Title Killing "%process%" ...
echo(
echo          Killing "%process%" ...
echo(
echo %date% *** %time% >> %TmpFile%
For %%a in (%process%) Do Call :KillMyProcess %%a
Cmd /U /C Type %TmpFile% > %Resultat%
Start %Resultat%
GOTO :menuLOOP
..*****
:menu_[3] Search for files
cls & color 0A
echo(
Set /p "Location=Enter the folder location where do you want to serach> "
cls & echo(
echo You chose this location "%Location%"
echo(
Set /p "FileName=Enter the file name to looking for> "
Mode con cols=90 lines=11
Set Tmp=Tmp.txt
Set SearchResult=SearchResult.txt
echo( & cls
echo( & echo Please Wait for moment .... Searching for "%FileName%" on "%Location%"
where /r "%Location%" "%FileName%" > %Tmp%
Cmd /U /C Type %Tmp% > %SearchResult%
Del %Tmp%
Start %SearchResult%
GOTO :menuLOOP
..*****
:KillMyProcess
Taskkill /IM "%~n1.exe" /F >> %TmpFile% 2>&1
echo ***** >> %TmpFile%
exit /b
..*****
:EOF
EXIT

```

Hackoo - June 21, 2015, 8:43 am

Hi ?

Following to [this discussion](#) I made an update to this program

And here is its screenshot :

[img]http://nsm08.casimages.com/img/2015/06/21//15062105323511244313387558.jpg[/img]

The source code :

PHP Code

```
<?php
@Echo off & cls & color 0B
Mode con cols=90 lines=15
Set TmpFile=TmpFile.txt
Set Resultat=KillResult.txt
Set MyKey=
HKLM\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Image File Execution Options
If Exist %TmpFile% Del %TmpFile%
If Exist %Resultat% Del %Resultat%
:menuLOOP
Mode con cols=90 lines=15
Cls & color 0B
Title Process (Starter / Killer) and (Enable / Disable) execution of applications by Hackoo 2015
echo(
echo(    =====Menu=====
echo(
for /f "tokens=2* delims=_ " %%A in ("findstr /b /c:".menu_" "%~f0") do echo(    %%A    %%B
echo(
echo(    =====

I add another item on the menu to take screenshots of your applications and of your desktop (Not working on Windows XP)

The Snipping Tool by Microsoft :

The Microsoft Snipping Tool is a reviewer's best friend. This is a little application that might go unnoticed, but I am telling you; it is a time-saver.

This tool allows you to carry out a simple task: take screenshots of your screen. I know there is a button that reads something like Prt Scr in your keyboard and that it will take a screenshot of your screen and take it to the clipboard. There is something better than that. When you activate the Snipping Tool, you can select a part of your screen with your mouse and it will be captured. That capture can either go to the clipboard or to a file. You can even select what type of file you want it to be saved to. I have to get screenshots of applications all the time, and pasting a screen capture into a graphics editor and then cropping it, all it takes me about a minute. I can do the same work in less than 2 seconds.

Please try it from pastebin, i just post it now the [Source Code](#) because it is well formatted than here !

```

eXaByte - June 23, 2015, 1:46 am

Using the following combination "ALT+PrtSc" takes a picture only of the focused window.

Thank you for this information trick that i don't know it before !

Nice trick ?
