Thread: [Apple Keychain Vulnerability - Mac OSX and iOS](#)

cyberducky - June 17, 2015, 8:58 pm

Apple was quiet for six months without any idea of the huge vulnerability that left 88% of iDevices and Macs "completely exposed" to attacks.

Here is a video demonstrating the attack:

It is insane that a huge corporation like Apple went THAT LONG without a clue there was a problem.

Katana - June 17, 2015, 9:05 pm

Exactly, who knows, after apple's so many messups, there are probably more exploits out there.

How do you have a 100% warning level? ?

Very few can withstand this much of a power level.

cyberducky - June 17, 2015, 9:25 pm

I also forgot to mention, thanks zYMPOTM for showing me this article.

It's not the first time a vulnerability within OS X has gone that long without being noticed. You think months is bad ? How about years for the recent exposed Rootpipe exploit ? I believe there are many vulnerabilities within OS X. It's just a matter of time before someone finds them and decides to come out about it.

PoC of the Rootpipe exploit.

Of course it's not the first, but it's weird that after the first iCloud breach, they haven't monitored it still. iCloud has been a target, but iCloud hasn't been a focus for their sec team.
