Thread: [Connecting to Database knowing MYSQL database user/pass/server/db](#)

ari12 - June 20, 2015, 10:55 am

I know the names of the database, user, password, and even server for many websites. I do not have the admin login though. How can I log onto the database remotely? I will pay if someone helps me.

skype: cardyboy22.

use a remote connection tool. Adminer has support for remote connections I believe but if the service isnt allowing remote connections there is jackshit you can do about it really

Is Adminer the name of the program? I would like to check it out

WubCannon - June 20, 2015, 2:53 pm

It's a php script yes. Give it a Google it's everywhere

selinux - June 20, 2015, 5:58 pm

Code `mysql -h siteip -u'username' -p'password'`

HaxOr? - June 20, 2015, 6:00 pm

If you are on Windows try HeidiSQL or if you want Adminer (PHP script)

Viktory - June 20, 2015, 9:59 pm

If they allow connections from outside localhost then you can set up adminer or dbkiss on a box. Or you can download the mysql package and connect using it too.
