I'm also offering tips, answering questions and more.

I'm not a RAT expert, but I can tell you how I get my stuff and help others.

Not even sure what the fuck a worm god is, just saw that the account had some inventory items, so I snapped it.

RAT's are worth taking the time and money investment in the long run, good luck bud.

What method do you use for getting your steam/rs slaves. These are the people I am targeting so it would be some help to know your method.

Why are you even asking him to make a vid for you

He really does not care about the items you will share with him

Really not ?

I'm new to ratting still figuring out the basics

For your rs slaves to you use a reverse proxy so it comes from their IP address?

Also do you rat with YouTube videos saying "free rs money adder"

Do you use ctOS, since it has bank pin recovery?

To answer all of your questions:

- Reverse proxy is used from their IP to bypass email security.

- I do use Youtube videos.

- I use OSCelestial, for bank pin you just record their screen when they are entering it in.

Couldn't it also be used to login to their runescape acc via the web client?

And alright I was looking at a rat to purchase thanks

I guess it could be as well.

Also remember no crypter needed for oscelestial because it's an FUD stub.
Just updated the thread with my current bank after another successful RS Account.

Because the police will spend 1000's of dollars and hours of time tracking someone under a vpn
that took a kid's steam account.

Good shit bro with those cs:go slaves.
I've been targeting runescape, getting a bunch of steam too.

Mind hooking me up with some cs:go slave targeting tips? How do you target people with so much
shit in their inv?

Remember, if you don't want to, that's cool.

Noob question but how do you trade the items once you have ratted them?

my guess would be if you remote desktop them and controlled there account from there computer

you just send them to your account from there.

Nope. I log into their account on my VM, bypassing steam guard.
