Thread: [\[Tutorial\] How to get HQ email:pass/user:pass/proxy lists.](#)

iApple_ - June 22, 2015, 2:10 am

Download morCrawler here: [Private link, uploaded just now after a virus scan.]

Download link:

Code [http://megabitload.com/download/index/94652619/Virus scan:](http://megabitload.com/download/index/94652619/Virus%20scan)

Code [https://www.virustotal](https://www.virustotal.com/en/file/05b313737f5bfff7890d634520fbc4a11c8c2a8734d0ab4306c8fe249d1a572f/analysis/)

[.com/en/file/05b313737f5bfff7890d634520fbc4a11c8c2a8734d0ab4306c8fe249d1a572f/analysis/-](https://www.virustotal.com/en/file/05b313737f5bfff7890d634520fbc4a11c8c2a8734d0ab4306c8fe249d1a572f/analysis/)

How to get proxies with this:

Step 1: Open morCrawler and where it says "Default" select Proxies.

In the search seed, search "SSL proxies pastebin", or something along those lines.

Step 2: Wait for it to take from the sites, and when it finishes you should get around 10-200k+ proxies.

Step 3: Press save and save it anywhere on your desktop.

How to get email:pass combos with this:

Step 1: In "Defaults", select "Combos".

Step 2: Leave the URL filter as is, and change the Leech filter to how you prefer.

This code will get you user:pass combos

Code `((?:[a-zA-Z0-9]{5,}){5,})` This code will get you email:pass combos

Code `([a-zA-Z0-9._%+-]+@[a-zA-Z0-9]+\.[a-zA-Z]{2,6})(?:[a-zA-Z0-9]{5,})` Step 3: In the Search seed, search up something like these.

Code "Fresh SQL combos"

"Pornhub members" (this gets over 90k if lucky)

etc, if your smart find new ones. Step 4: Wait for it to do it's thing and save to your desktop.

-

This is my first tutorial, so I can see if you don't trust my links.

If you don't look around and try find an official link. I will soon post a tutorial on how to get combos with SQL.

Good day :)

This would be useful for some people.

canedipecora - January 24, 2016, 5:18 pm

thanks, it's very useful for me! finally i've understood how the program works! after my first leech i've tried to use google's dorks, very nice!
