2C-B - *June 24, 2015, 3:38 am*
First of all, i am in no way associated with TRH4CK or CloudCrypter

One.
Damn.
Huge.
Vouch.

If you like me, use Luminosity Link, you will know that not all crypters handle it equally well, without sacrificing some of its lovely options. I have tried ALOT of diffrent crypters paid and free, .NET and native, and while some of them have worked just fine, none of them have worked as smooth and clean as CloudCrypter, its like its not even crypted, just made FUD.

Settings for crypting Luminosity Link:

Luminosity:

You can enable everything here, all features will work

CloudCrypter

PE type: Self Injection
Junk Code: 15
Variable Length: 20
Everything else disabled, though you could play around with all the options :P

Big vouch for this crypter, have 2 other well known crypters that are never getting FUD and this beats both by far.

Stub is also only 30kb

Quality of Crypter: Still 10/10 litterally gave me close to 100% update rate on my botnet...

Might have caught 2 minor detections, but again i use an old stub, and i am sure this has probably already been dealt with...

Still favorite crypter on HF :D

r00tz - *June 27, 2015, 9:43 pm*
This is an awesome crypter kept everything fud 100% worked well with Bablyon Rat and Luminosity Link. I might be new here and a "noob" but alot of the "sellers" need too learn a thing from this guy. I bought multiple items on this site and have been disappointed with poor customer service, snobby immature "im the best ur below me", attitude(which i notice ALOT with coders not just this site). This guy is respectful, mature, and helped me great deal even before adding features in before purchasing his product.
Would buy again! Don't be scared guys he is the real deal!

Clitcoin - *June 28, 2015, 7:30 am*

Fl0werp0wer_ - *June 29, 2015, 5:15 am*
This crypter appears to have all the features of nearly every crypter on the marketplace congratz!
This product looks amazing, I will most likely purchase this for my next crypter! does it become

detected by 'some' AV's with the EOF extension in the crypter settings or is this 100% FUD with all settings.

I could PM you this message however, I thought that if I asked the question others would not give you the headache of having to answer it a million times.
Cheers, ?

Just purchased this crypter and let me tell you something, I never have gotten setup so fast with any rat as I got with this.
I purchased it, crypted my file with the settings I liked and it was fully FUD, other crypters I tried I have had to configure a bunch of settings and remove to get the file FUD, I didn't need no custom icon on this or anything, so simple yet so powerful.
5/5 from me.

Huge huge vouch for this crypter ! For sure one of the best ever .net crypters I've used.

Just ran this on 110 slaves trying to move from the loader and got nearly 100% exec rate wow. 104 out of 110 .

Also FUD almost all the time, and whenever it gets a detect coder instantly Refuds it.

The panel is also extremely well accomplished, achieving the perfect balance between simplicity and flexibility of settings.

If you didn't get this yet, you're missing out !

Best of luck with sales !

Stub size is about 30kb but depending on the size after crypting, I made it so that the USG will add ressources of different kind to make sure its unique. So when crypting, or even just crypting again the same file, size can be different to up to 10kb.

Does this work with LumionsityLink?

From LumionsityLink crypting help thread:
What Crypters Work Best?
According to KFC Watermelon himself, any crypter which stub is coded in .NET and has self injection will work perfect with Luminosity and its features. He recommends AeonHack's RunPE, stating that the self injection on it works excellent with Luminosity and its rootkit.

All I can say is, Wow amazing crypter!! I was a bit skeptical at first because its a cloud crypter, which I've never dealt with. I've bought at least a dozen other crypters from hackforums that cost all the way up to $40 a month. I would definitely vouch for this crypter to be the best out of all crypters on HF. Once you use it you will definitely not want to go back to your old crypter. Works flawlessly with LuminosityLink and Babylon RAT

10/42 or 11/42 is usually Barys and Suzy.

That means, changing your icon / assembly should fix it :)

How does it work?
I never saw a crypter to crypt Ardamax keylogger.
There are two situations about Ardamax Keylogger:

1-Remote installation exe file.
2-Files after installing exe file on target machine.
Can this crypter FUD this logger in both ways?
Can i have a test of this crypter?
I sent some messages in skype and still did n't get any answer.
Is it possbile to have a demo of this crypter before buy?
(Aug 16, 2015 02:18 PM)Trenchguns Wrote: [CITE] Then yes. It'll crypt your keylogger
Why did you say that man?
I checked CloudCrypter first page again and it's a .net 2.0 crypter and can work on .net programs only. c#, vb, etc...
But ardamax is a c++ logger.
Why did i choose Ardamax?
Because they wrote it in c++ and i don't want any .net dependencies on target machines.
As you know in windows 8 .net 2.0 is off by default and this is why i choosed ardamax.
But this crypter forced us to install .net and find targets that have .net installed.
Also in 2 prev posts you can see the owner of this crypter is online and he still has n't answered to my questions and i do n't know where is he in skype?

Hi again
As i said in prev posts i am c# web developer and know somethng about cryptography.
I choosed Ardamax because they wrote it in c++ and works perfect and it's very simple to use.
Every programmer knows simple programs always are the best.
There is no .net obfuscator on the net that can obfuscate non .net assemblies such as Ardamax exe file.
But as you know Cryptography & Obfuscation & Crypters/Binders in such these forums are different.
Cryptography & Obfuscation are part of Crypters/Binders to protect exe files.
every Crypters/Binders out there can support scantime & runtime and the owner of this crypter should handle this first.
After that the big problem is cryption of installed files on target machine and i really do n't know which method do Crypters/Binders use to crypt them?
If the owner of this crypter can crypt Ardamax in both ways :
1-exe file.
2-installed files on target machine.
I will tell you have a powerful crypter in your hands.
Waiting for his answer...

I hate to be that guy but...

I have created 2 support tickets the first was closed prematurely, before actually making sure my issues was solved. The 2nd was deleted and never answered.

I am trying to encrypt LuminosityLink client server, i can get 1/42 but can not achieve 100% regardless of settings or icon (i have tried over 20 different icons). The crypt again feature will often turn my 1/42 into a 3/42. Now 1/42 isn't bad but i would like to see 0/42 and some actually assistance in getting there without a generic "just use crypt again" response.

I have created 2 support tickets the first was closed prematurely, before actually making sure my issues was solved. The 2nd was deleted and never answered.

I am trying to encrypt LuminosityLink client server, i can get 1/42 but can not achieve 100% regardless of settings or icon (i have tried over 20 different icons). The crypt again feature will often turn my 1/42 into a 3/42. Now 1/42 isn't bad but i would like to see 0/42 and some actually assistance in getting there without a generic "just use crypt again" response.
When someone creates 2 times the same ticket, the first gets answered and second gets closed. I answered all tickets ... If I haven't or I missed (no way I deleted it), let me know via PM please!

Thanks!

The point i was making is there should of been no reason for the 2nd ticket to be created if the first ticket was not prematurely closed, with the answer being "just hit crypt again" ,(trust me, i tried that before creating the ticket) and proper support was given. Sorry, wasnt been able to be on Skype, will be today. I tried the binder with different files and it just doesnt work for me.

What i want is:

File: "My own program.exe" (Visual Studio C#.NET Framework 4.5 exe)
File Binder: My RAT
Run bindet file once [x]

But what happens when opening the crypted exe:
"My own program.exe" crashes, wont even start once
RAT is executed tho

Without the binder "my own program" starts without a problem. I even tried it with different exe files, like program setups or anything i could find.

mirc00 - *August 24, 2015, 2:02 am*

The funny thing is, it works vice versa but that doesnt help at all. If you do it like this:

File: RAT.exe
File Binder: "My own program.exe" (Visual Studio C#.NET Framework 4.5 exe)
Run binded file once: [x]

It executes the RAT every time, but starts my own program.exe only once (but it starts, so its not a problem with my program itself). But it doesnt help because you will have your program autostart everytime because your RAT autostarts and so does your own program.

maikuthe1 - *August 24, 2015, 4:41 am*

It does not work. I moved from LuminosityLink to DarkComet and i cant even Crypt a DarkComet server. DarkComet server alone works without problems, but after trying to crypt it with CloudCrypter (not activating any settings besides Encryption Key/Encryption Method) the crypted file needs UAC to start and when i try to start it, it just crashes and doesnt execute the RAT at all.

And yea if i try to use CloudCrypter to bind my uncrypted RAT with a normal exe (like a program setup) it executes my RAT but the normal exe crashes.

Have been using cloudcrypter for a month and it's really awesome :) Most of the time it's fud or close to fud and it's quite cheap aswell comparing what you get for that price from other crypters.
Support is really great aswell, answers and assist with any problems, questions.

You should actually use an icon. I can get FUD very easily by just using an Icon, Assembly, and playing a bit with the settings under the USG tab.

"FUD" can only be used if the detection rate is 0 because FUD means "fully undetectable".

Hey!

I won't be selling private stubs for a few days, until we are sure that our new update works 100% good. We've been testing it for a couple weeks now, seems stable, but we need to be more sure with more crypts!

Sorry, you cannot save your crypter file as an image. Plus, if you meant that, our crypter currently does not have any extension spoofer at the moment, as we are cloud based, and we can't make it work with it.

his crypter looks good, works well with darkcomet cythosia and botnets? I bought Aegis crypter crypter and that disappointed me so one day after the stub is detected.
his crypter although remains fud almost six days a week is definitely superior to aegis crypter.

Vouch for my guy TRH4CK, and the good crypter he has.

I like the design, and the idea that it's internet based, it makes everything to sick and clean, and also very easy and unique.

Thanks! :)

i ran the progrma and restarted the computer and its offline D:
i disabled startup/installetion on luminosity and set the reccomended settings u have on your thread but my luminositylink client is offline. so it doesnt rerun the program when i startup D:

EDIT: i figured out i have to click "OK" on the startup message.
cause when i restarted pc the startup message poped up again :O.
i only wanted it to popup the first time it started up, not when the pc restarts too cause then its suspisouse.
Anyways i have to clikc "OK" then the client pops up on luminosity.

cant we get an extra option to only popup the message once

That actually, isn't an issue. It will happen with any crypter, but will only show once. Won't be shown again, for example, during startup, you will get a silent run, so that won't be shown.

Always Eset or Dr Web

Tried a million icons.
Even when FUD it has never lasted longer than 3 days.

I'm sorry to tell you this mate but as a crypter owner myself I know this.
Nowadays any single crypter that is sold in public gets detected in a matter of 1-5 days.

Nod32 is the worst.
If you refud today, tomorrow or in the next day it will already be detected.

Nothing you can do about this.
The same happens with my crypter and I can assure you with any other crypter in this market.

For long fud durations the only solution you have is to find a private crypter with private stubs.

(Nov 20, 2015 05:49 PM)thx4info Wrote: [CITE] i got it 0/42 but if i upload it and someone downloads it, chrome detects it. why ?
Google Chrome will always show a warning on that. Its not a detection, its just that when you download using a website that isn't a legit file upload website and that Google hasn't approved it, thats what will happen. So basicly, just upload to a different website, its not a detection.

The crypter is online and FUD..
Got a question?
Just ask!
Ill be on for a few hours :)

?Sephirot™ - *December 2, 2015, 10:08 am*

Hey... can i have a free trials? I want to try it, if is good, you have all my money 100%. (because i have bought many crypter from hf and all are fud at scantime but no fud at runtime.)

NoHax - *December 2, 2015, 10:20 am*

I don't know why i haven't vouched here yet, anyways, this is one hell of a crypter.

Really talented and awesome guy to talk to.

Normally there aren't free trials, but if you really want to see the crypter in action, I might be able to boot up my vm again with a few avs on it and run your crypted file on it. (So long as Thr4ck hasn't revoked my support access to the crypter, if he has I'll talk to him when he gets back on)

Exactly, we do not really offer trials. But we offer to test your stub crypted over TV, under a VM. ?

Woah. So I bought a month and I am pretty blown away.

I have never used a cloud crypter and I am so fucking glad I bought this.

The options to customize the stub are great. If you play around with the settings, you can decrease the detection rate by yourself without relying on an update from the owners.

The best part? As soon as you crypt the server, there is an option to scan the file directly on the site which is way faster than any other site.

Money well spent.

But beside that, I can think of 2 things.
Icon or USG.
For icon, you must change it. For USG, simply click on Crypt Again.

As for the reporting, did you try the file before cryptig? If it works, then try to reupload your file again, usually thats the issue!

Fast question...

If I'm using Luminosity, what is the best option? (i.e. Self Injection, RegAsm, etc).

I want it to work on all versions from WinXP, etc.

Monyaks - *December 23, 2015, 6:41 pm*

Would like to replace my initial post voicing frustration with a huge vouch full of admiration.
Now that I've played around with this, all that is left to say is I'm very impressed.

For Luminosity users, the key is using the "Startup", "Melt", etc., functions from the Lumi rat software and not relying on those options of the crypter. The crypter supports all options of luminosity including the ring3.

But to achieve maximum results on crypt, play around with the USG and perhaps a custom icon.

Note: Sometimes a crypt will flag - but if your patient and just click RECRYPT - it will go from a -5 flag to 100% fud. So he's obviously using multiple stubs and encryption methods to dynamically generate unique results each time.

So again - don't be discouraged if your first crypt is not fud. It only takes 2 seconds to create a new crypt which is nothing more than a click of one button. No need to reselect 300 options to re-crypt. No need to re-upload payloads, etc. - which means your payload its there on the server to recrypt and also re-scan anytime.

Even though people suggest using Self Inject with LL you're better of injecting in RegAsm. I've tested it a few times already and using Self Inject messes up the rootkit and causes the process to be visible (unlike RegAsm).

Like i heard you made a update so you just click generate icon and assembly and crypter does it?

Thanks i will buy if so :)!
Hey

Well, not choosing an icon and assembly won't be FUD.
BUT, just putting an LL server and clicking: Generate Icon and Generate Assembly, you should get FUD. ?

Thanks!
(Jan 8, 2016 03:22 PM)kingfly55 Wrote: *[CITE]* ESET detection still there

ESET is not there actually. The icon is causing trouble. When an icon is distributed or uploaded to

VirusTotal, it most likely gets detected by ESET as injector.

Yes exactly, I have tried many stubs and they were all FUD that way. The scan on the OP (first post), is a file on which I used Icon and Assemly generator and it was indeed FUD. ?

Yes you can login from both of them !
Updating something on the server, should be back within an hour, crypter can still be used ?

Then you're mass-spreading, uploading to file hosters that distribute or sending files over skype (skype + VT = detections). Or simply the guys that got your files, scan on VT.

We are finally back. Support will be on SKYPE and on TICKETS all day long. If you have any questions, expect a fast answer during the day.

EOF has temporarily been disabled while we fix an issue related to it.

Getting detections? Verify your Icon and Assembly. They are really important. Use something HQ and you will have a FUD result for sure. Also, CRYPT AGAIN can help fix these issues!

had this crypter like 2 months ago for 1 month and could never get it fud with LL.
even after crypting for 20 times it stil got 2+ detections and when i asked for support the answers i got were absolute shit.
all they say is just recrypt until 0 detections .

Sorry about that. Fixing it in a moment..! Those 7 detections is because of your Assembly / Icon.

Hi, I never said to crypt until you get 0 detections. I know the settings to use to get FUD. Usually when you have more than 5 detections, thats most likely only Assembly / Icon issue. If you PM me the settings you used I can give you what to use na dchange so you can get FUD. If there is 2 detections, most likely Eset for one of them, which gets fixed within 6h. As for the support, PM is the faster way of getting it.. We have tickets and skype which gets answered every day or two aswell. If your timezone is different, the only way for skype is during the weekend. Thats when I am more online.

Working on ESET right now.

I have used almost all the crypters on Hackforums. And this is the best crypter. This the most stable one, other crypters also work well, but often they throw errors like this and that file stopped working, that creates suspicion in your victim. So I'd say this is the best crypter.

CloudCrypter is not to be used to bypass AVs. This is to prevent malwares from being crypted.

I have just bought a membership and used the crypter. Its easy to use with many functions and works great but because of my inexperience I am not able to make my file %100 FUD (4/41).
How could I use Cloud Crypter to make my file 0/41?
I have changed the icon but not sure which icon is better to select? (is that about color, shape or size?)
Also changed many settings but results are the same.
Waiting your help.

Hey,

If it's caused by CloudCrypter, I can fix this. However, if it's because of LL, I cannot as CloudCrypter is not meant to be used for malicious usage.

Yes a little bigger icon should fix it :)
I am trying to fix my Icon Generator, when that is fixed, hopefully everything would be even easier :)

Also, before changing your icon, try clicking Crypt Again, it may fix it, sometimes USG causes both Ikarus and Kaspersky and the same time :)
I think we got 1 detection at the moment..! It should be fixed within the next hour or two max ?

As we are cloud based, I do not want people to be able to upload more than 12MB files. This is to

keep the crypting server stable.

Please i have some weird question. I think my RAT such as LL is a .NET Framework Program, so it doesnt work in most old windows, like windows XP or so because i each time i try to run it on those i get errors or a file missing issue, so i was wondering if there was some kind of support that your

crypter offers to the stub to be able to have it run on unsupported versions of windows. I hope I am making sense.

Getting these:

Need to get rid of at least the avast one.

Am I doing anything wrong?

Using .ico from the internet
Using Luminosity Link with these settings:

Luminosity Link:
Delay: 15 Seconds
Injection: Self Injection
Startup: Enable from Crypter only.
Mutex: Enable
Process Persistence: Yes

No file bind.
No messagebox
At ExtraSettings (in crypter) i just ticked Remove VersionInfo (and the Persistance, as recommended from settings above)
At Antis (in crypter) ticked User Account Control
No assembly information

USG = generated encryption key (biggest one)
Resource type: wav
Variable Naming: English
Lenghts and Junk: 20 each

Problem on my end or did the crypter become detected by those 2 and needs an update?
Any help would be appreciated, thanks

====edit====
Just found the support thread and have read that MSIL means Icon and or Assembly information, guess that means I need to untick Remove Assembly Information from the crypter and enter either some assembly information or generate a custom one, right?

====edit2====

tried at least 100 different icons, assembly, no assemblies, assemblies with no icons, icons with no assemblies, nothing works, can't shake that

Warning (UAC) popping up on target pc every time I start it + other stuff.
Added you on skype for some support once you're online, sorry for posting here if I shouldn't have, I see the support thread is pretty much dead

Does AVG detect when you try to run it?

ausblacksmith1 - *July 3, 2016, 7:23 am*

Yes Immediately it will detect and try to delete its everything. I think we have to take a closer look at the online scanners. Though it will be 100% fud but i have avg on my pc but i disable it when i am doing this stuff, i only tried this when i realize most of my clients were gettind disconnected and i realize AVG was being a pain in the ass lol

The file is scantime FUD, not runtime the online scanner is honest.

ausblacksmith1 - *July 3, 2016, 11:23 am*

Yes I just realize it. Run time, Avg gives it hell but scan time it survives it but run time is all that counts you know. Its important. I mean very very important lets pray the Dev team finds a way to get around this. By the way i would like to say their crypter is the best so far when your a LL user. I meant that Gmail is detecting it as an attachment and that avg is detecting it runtime (2 separate issues, my bad on the phrase)

It is, overall, a good crypter - especially with LL, still some problems to be sorted out but hopefully the dev will fix them soon :)

Actually, yes, it may have been detected runtime. If it's a CloudCrypter detection, I can fix, however, if it's the file is being detected then I can do nothinig as CloudCrypter is not to be used with malwares.

I will have a look on it as soon as I can (probably tomorrow or the next day), if it's CloudCrypter detection, I will fix and update you guys about it!

I'll be back online in 4-6 hours ?
Dear members, I will be offline for the next 24 to 48 hours. I am flying to Europe and as soon as I get a connection I will be on for support and if needed a refud.

Thanks!

No, it doesn't. CloudCrypter is used only to protect your files from being decompiled. So it doesn't have an AntiBotKill feature.

Hey! so it's been the first day since I've really tested this and I'm still quite new to how crypting works.

So with my results I haven't been able to get FUD, but not bad, as the scan is showing detected from AV's that don't really matter.

However, even though it's FUD via scan, when trying to test this out in Norton or MalwareBytes, like having a friend download the file, the AV's catches the file. MB even blocks the DNS it's sending too.

How can I fix this? I'm using IM4 as well as making sure the settings are disabled on IM4 and enabled from the crypter.

Spear_ - *September 5, 2016, 1:09 am*

I got to try this.

On Scantime is good, only Avast.

On Runtime, Windows defender detected it, woah. Are there any fixes upcoming soon ? ?

Hi,

CloudCrypter is not to bypass AVs. If CloudCrypter's library is detected, I can fix it. If it's caused by your software, for legal reasons, I am not allowed to fix it.

I will update you soon.

CloudCrypter is FUD. It doesn't causes any issues on runtime, as long as you protect legitimate files. If you protect a malware, AVs will detect it from memory.

this is just pathetic, you said your crypter is not meant to bypass AVs but if people stop buying you will change story. can you be sincere with yourself with such words. if you looking for legit crypting why not implement antivirus on your server that won't allow upload of virus binary for crypting. just fix the problem and stop being holy.

Its not about selling.

Like it says on OP, its to protect your applications from being reverse engineering, cracking, etc.

I woudnt implement an AV in my server, because files already have false positives (scan time detections).

Like I have said, if the problem is on the side of CloudCrypter, I will update it. However, it may take a bit so I can understand from where it is.

I will update, and will let the users know.

I just crypted my file and i was happy that i got it FUD 0/35 on a no distribute scanner. then i was going to test this file on another computer but it was corrupted. it says "file has stopped working each time i try to run the file" on that computer. i crypted this file by 1pm today [1st december]. where you updating settings then?
secondly, the file is .NET dependent but i chose was self injection. the injections available under .NET in the site seemed common so i asked a geek who said self injection can work with NET. Could this be the fault or site maintenance? i tried protecting again but there was a warning on the site that no protection should be made for now. how do i solve this error. thanks

Please refer to cloud protector's dashboard notifications for updates/news on their cloud-crypter. Also please note you can use their support ticket system for any general queries ?

@purest21: I was about to ban you, seriously. Next time read it. Because of you I had to take the site down to be able to do updates else you would just spam the protecting area.

Yeah taking care of them. No worries you WILL receive your time, from the day it was offline (That gives you an extra 4 days...!)

i'm sorry boss, didnt mean to spam on the protecting area. the instructions on crypting werent much so i thought i had to learn on my own. it wont happen again.

I think i fixed it. i enabled End Of File and it seemed to work fine with the Njrat. but the only problem now is when i try to run the crypted file in another computer it always ask in a prompt "do you want to allow the following program from an unknown publisher to make changes to this computer". how can this be disabled. i chose to disable "User Account Control" in the crypt setting when i was build crypt, after building i put the file in archive .zip, uploaded it and downloaded with the other computer for testing, yet it brings up that prompt when i try to run it.
someone should help please

Do not spam everywhere. Either PM, Post, or Ticket. You sent it everywhere. I have responded both PM and Ticket. Check either of them.

If you protect a legitimate file, you won't receive any issues. However, if you are using a malware, you will be having issues with AVs on runtime.

I use Cloud Crypter to crypt netwire stub since 1,5 year
All is working great with this crypter.
It crypt native and managed rat without any issue
More Over it have hidden startup..... really coool function ??

Most of the time it's FUD on scantime
On runtime, i've tested with Avast, Kaspersky, Bitdefender MS security essential, maleware bytes and it's ok.
For the other AV, i haven't tested yet.

Self Injection
Mutex
Startup (if you want your executable to run everytime)
Assembly (make sure to check Custom Assembly)
Icon (you can use IconArchive.com website).

The protected file is seen as dangerous by Google Chrome, any way around this or is there any

reason for this? (Even when I zip the file)

For the rest great crypter, so far only detections by NOD32

Amazing crypter. Stays FUD for awhile, unlike my other crypter that got detections within 1-3 days. Only issue is NOD32, but that's very understandable since most crypters have trouble bypassing it.

Absolutely outstanding crypter, will be sure to renew my subscription once mine ends!

I woudn't advise using CloudProtector for .NET 4.0 fr now! If you can, wait for our next update, it should be up by Monday / Tuesday. Then, I can guarantee it to work in a stable manner!

Usually, Google Chrome blocks domains. When downloading from CloudProtector, you surely get the warning message, that is because our domain is being flagged by Chrome sadly...

I was busy on the update and a private stub. If you haven't received yours yet, give it another 8 hours and it should be done!

NO extra settings.
NO Antis/Disablers
With/Without assembly: no difference
Played with Resource Type, no huge difference.
Variable Length / Junk Code played with, no success.

Your ticket has been answered, the quickest method of contacting CloudProtector's staff members is through PM (trh4ck) or through creating a ticket. We are regularly active and answering tickets as fast as possible.

Nevertheless, don't hestitate to purchase CloudProtector!

Change ur assembly & icons.

these are generic detections and should be fixxed with that.

if cloudprotector doesnt do that try doing it with resource hacker.

Don't use this to crypt malware, CloudProtector is used to protect executables. Those are generic detections and were explained in the ticket how to fix them.

Hello respected OP. I'm interested into buying your crypter. But I wonder if it works with Babylon RAT and if it is stable. And if it is FUD. Also I would like other users to tell me about their opinion. Thank you in advance. ?

No crypter can bypass windows defender since it blocks all unsigned executables.

hey man, can you confirm now that this is FUD or below 5 detections? im using # rat
does this crypter work with # RAT and is it below 5 detections? if yes, i might give it a try

I think he means if the stub itself is native or not.

Will this work on the quasar?
How long will my server be FUD, considering that I will only use 5 machines, and I will NEVER spread it?
Is this the best option for my case?
I do not want to spread. I want you to keep FUD for as long as possible. If this is not the best option for the case, any indication?
Thank you.

FuxXER - *May 31, 2018, 4:21 am*

It's working for quasar, i tested it before. If U wanna stay long FUD purchase a private stub, so your stub only using by yourself and not share aswell.

CloudProtector isn't designed to protect malware, you will encounter problems if you try to use it with malwares.

It's not really my fault. Since the end of VCM and ND, people are using VirusTotal to scan their files. And as soon as they scan with it (within an hour), the codes are detected with generic detections (razy/gen, etc).

I have banned 6 members yesterday and 2 this morning. As soon as we are done with banning them, it will be back to normal.

An update was pushed a couple minutes ago:

FuxXER - *June 14, 2018, 11:28 pm*
Perfect! ?

ekwueme - *June 15, 2018, 12:16 am*

Those scanning with virustotal should stop. TRH4CK another issue is researchers,most times they are the ones that actually scan peoples file without them knowing. because some are competitors and some are people who want to stop the use of crypters cos they feel people crypt files so as to spread

Why will my private stub still be shit then after crypting? Never been able to use for 2 months and subscription is going and that's money.

Apostle77 - *June 19, 2018, 4:39 am*

I advice that nobody should waste his money on this crypter.
Their service use to be good but is worst than shit now.
Better you use your money for a night with a slot than pay for this crypter now.
