Thread: [Storm.Bot New Kind Of Stresser !!?](#)

Lucifë? - June 24, 2015, 3:35 pm

So yeah i was surfing youtube and i find this 2 video here:

<https://www.youtube.com/watch?v=hDhukJ59snI>
<https://www.youtube.com/watch?v=Xtf2KV7om1Y>

video showing storm.bot i didn't really understand what kind of shit is this but its look like something between a stresser and a ddos botnet

i find some topic from seller over google and the price is 3000\$ O_O

any idea what is this? will worth it?

Alex™ - June 24, 2015, 4:53 pm

It's just a booter. Not worth 3k imho but whatever.

Lucifer Morningstar - June 24, 2015, 10:39 pm

Old & copy-pasted. It's a joke when they call HF users skids when they sell the same C&P'd shit for 3000% the worth price. The only thing thats worth it is the panel GUI and I'm pretty sure he just nulled it from themeforest as well.

Lucifë? - June 25, 2015, 4:38 am

yeh i agree when its about ddos HF members are 1# ?

Tricorn - June 25, 2015, 4:40 am

Yeah doesn't seem real to me, probably just a joke.

Also on a side not, your signature is pretty cool.

05317832892 - June 25, 2015, 5:07 am

It seems to me like he is selling a botnet source code that can be linked with an online panel? I'm slightly confused?

SIM-2223238 - June 25, 2015, 6:33 am

I've used this, this is a linux http panel.

Its gay as FUCK.

HIGH PAID FELLA - June 25, 2015, 6:37 am

It's a linux targeting botnet, can be used for DDoSing and is highly recommended for it since linux bots hit hard as fuck.

Enforc3r - June 25, 2015, 12:21 pm

It's an attack server C&C panel, with features. It is nicely coded and professional. It's not a booter in

the sense that you sell clients subscriptions but like a booter it will manage all your servers for you. Scan your lists etc

It use to only have L4 attacks, coders promised L7 for the last few years but I am not sure if this has happened. And to be honest it does it's job perfectly. The sellers target market is not users that hangout here but more aimed at the professional DDoS'r who wants a powerful L4 attack to supplement his arsenal of L7 Botnets.

L4's advantages over L7 in this case would be an above average protected target or even an entire Data Centre to be hit with pure brut force for a long period of time. The costs are then quickly recovered if you factor in how much it would cost you to sustain a similiar attack using a botnet L7 attack. Professional DDoS'ers will can and do recover their costs within a week at best.

Stopped reading there. You do know it has panel vulnerabilities right?

It's the same shit these kids use in their booters. It's nothing more then a simple management tool. An overpriced management tool if I must add.

You can achieve the same thing if you know a little bit of PHP.

Enforc3r - June 25, 2015, 2:18 pm

Every bot has vulnerabilities! Zeus, BB, Carperb, Madness and on and on...

I don't know of a single booter that allows you to scan for NTP, DNS amplification lists from the panel. I don't know a single booter where you can select which attack servers to use. I don't know of a single booter that roots servers for you.

If it were that simple to code something decent in php then how is it that this product still demands and gets the \$2500 price tag. Where is the leaked code?

At least come back with something factual if you're going to knock me for providing some information to another user. Telling me where you stopped reading was probably the most useful and factual thing in that entire snippet.

Use the ssh2 function in php.

To scan for lists do `ssh2function("scanscript.php threadsnum otherargs");`

To only use a certain server do `ssh2function("bootscript.php threadsnum otherargs");` and just connect to one server instead of doing foreach.

"I don't know of a single booter that roots servers for you." Again, the ssh2 function is perfect for this, just execute all the bash commands needed in order.

This is not worth the 3k and is somewhat useless.

Bu... bu.. but, it has a nice UI & it looks hackerish, therefore HF users NEED this product!

If anyone on hf is interested in a beautiful, sleek and nice feeling version of this I'll give it to you for the low price of 2899!

well then - June 25, 2015, 7:31 pm

nuff said.

Since their website link has the word trojan in it, he was wondering if the trojan virus was included free of charge for visiting their site.

Looks like some wannabe Minecraft haX0r squad.

I don't need to read your post because I already know what it's supposed to do and how. It's not my problem if you're blinded by the fact that you like the GUI of a C&P'd project that can be done in less than a month. There's nothing "professional" about it. Any booter on this forum has the ability to do the same shit he "created".

You're just like all of these kids that think "It's made by a russian, has an overpriced tag on it, has a hardcore GUI" so it must be nice.

CubeBot - April 16, 2018, 10:49 pm

I want to setup a P2P botnet like Storm botnet Is there any tutorial / source code?
