Thread: [Three's/Renium's Feedback \ 2+ years](#)

lenaos - June 25, 2015, 1:07 pm

I've been on HackForums for a little more than about two years now; over the years I've noticed a lot of changes within the community along with HackForums itself—good and bad. HackForums is growing every day, thus leading to more spammers, more trolls, more gore-posters, this is only to be expected though. The community is starting to turn into 'questionable', it seems a lot of the contributing members are leaving and only being replaced by idiocy.

I came to HackForums for game hacks, shortly after my outlook on this website changed though. I became active in the graphics sector and just wanted to get better. I looked up to the Graphic Masters and wanted to join the group. I became friends with the members, and eventually joined Fly By Night (the 'evolved' version of GM), that was all HF was to me.

A few months later, or year, when fbn was sold I didn't really come on HackForums anymore. But, I started coming back more often a few months after that. I met a few new people, there are a few cool people here but a lot of people over-react over the little things and take this site too seriously; that's another flaw I believe this website to have. I've noticed more idiots have been joining, along with people who believe it's their duty to become a mini-mod. Don't get me wrong there's still a lot of people in the middle of this balance, but the number's decreasing.

I will only be pointing out sections that have decent activity.

The Lounge is full of some people who make you laugh, some people who take it way too seriously, and a lot of people who are just annoying. The Innuendo has some serious threads, and also members that help—I was surprised this was the section that has the least amount of trolls. The SRPP section is a shit-storm. AA is just AA. The music section is mostly only filled with people who talk about Chief Keef. The Hacking and Tech sections are inactive, however within the hacking section, the beginner hacking portion is the most toxic. No comment on the Game, Web and Tech sections. The Graphics section, I could have a field day bashing this section but I'll keep it short. Threads are placed in the wrong spots, the graphics marketplace is an absolute shit-storm and RMG is for people who want to get their post count up without knowing anything—how most of my posts still originate there, I don't know; considering I haven't been in it for almost a year. The market and money section, no comment.

Yes, maybe I'll edit the title.

"Heydra" shall now be your new name.

I shall now be known as "Hezeciedl," as it is only fair.
