Thread: [SQLMAP - SQLInjection Error Message Bypass](#)

madlab7071 - June 26, 2015, 3:20 am

Hello all i am using sql injection from last fews months now days i am facing on error message that

[::**] [CRITICAL] unable to access item '__sunleoeeeo__'

i tried searching online for resolving this issue but i didnt find anything that can help me to bypass this error message so if any one on hack form community knows how to bypass this error then please let me know..

Thank You
?

i agree but before moving to manual i want to master tool first i dont want to jump directly and using sqlmap i got to know different and some rare type of sql injections that i didnt find when i use to search for sql injections types... well this is how i think thank you for the advice but i need to bypass this error for better understanding.....

??

We won't know it until we get the URL

F-Nuke - June 26, 2015, 4:34 am

The error is basically SQLMap not being able to access the table (or DB) which might be from a DB other than the current one. This might be due to magic_quotes being used.

This might be due to magic_quotes being used.If SQLMAP managed to reach all the way to pull tables - magic_quotes ain't gonna stop it. magic_quotes_gpc prevents you from using single quotes and double quotes. That's as effective in protecting against SQLi as putting a picture of jesus at the admin panel saying "I will be very dissapointed if you hack this".

lol. But i'm talking about tables from different DB's other than the current DB. But that error is sure

for not being able to access any row/table/db.

what I have in mind is the site blocking the usage of the dot operator in the URL (SELECT table_name FROM INFORMATION_SCHEMA.TABLES)

Prolly yeah. If OP could give us the URL, it will be helpful.

Well if i will share the url it will be unfair with the website owner.. but this is the error i am getting [::]**] [CRITICAL] unable to access item '___sunleoeeeo___'
?

Th3PonyWizard - June 29, 2015, 2:25 am

?Right now, it's not fair for your brain as you're insulting it by using a tool. Learn manual.

ProblemSolva - June 30, 2015, 2:17 am

Op have you already tried to use a tamper script, or the hex option? Sometimes you need to configure sqlmap, for some situations for example if you want to bypass a WAF.
