Thread: [Christmas Tree](#)

iLogic™ - June 26, 2015, 7:32 am

Do you need to know what was here ?

Don Flamingo - June 26, 2015, 8:30 am

I'm assuming by generate a tree that tree is created programmatically and not just inserted images.

with that being said good job, you must have a really good understanding of GDI to be able to create that shape let alone with all the inner details. Really 10/10 work. I haven't looked at the code but does it have more than just that one tree? Does it generate customized trees? I can see a lot of potential with this good job.

Unless of course it isn't GDI, in which case I'm not sure why this thread would even be made but I'm assuming it's GDI.

(Jun 26, 2015 08:30 AM)Don Flamingo Wrote: [\[CITE\]](#) I haven't looked at the code but does it have more than just that one tree? Does it generate customized trees? Yes it can generate more than one tree (if you mean tree type)... Look at screenshots:

But if you mean more than one tree as image with more trees it can not generate it.

I'm not sure what the point of this program or thread is. What useful is being done or shown here? It's not like the Tree's shape is done programmatically and has different tree shapes to be generated from as well as different decorations to be chosen from (which wouldn't be tied in with the individual tree shapes).

How does the gifs work, what kind of animation is going on? Is it just reusing the same few pictures you drew and making a gif out of them with the given Text? I literally cannot understand why you have done this or posted this.

You still did not answer any of my questions.

This project is doubtably helpful, can you give an example of "how to draw to picturebox" in a code snippet?

Odus - June 26, 2015, 9:45 am

How about revisiting it and allowing the user to enter a number of baubles, rows of tinsel, optional star on top, etc. through properties?

Vysse - June 27, 2015, 12:53 am

Just an off comment. I dunno why people post virus scans. I'd trust a exe that has a detection over one that is FUD anyday on HackForums.

Just one word : Original :p

bluntlycreative - June 27, 2015, 6:37 pm

This is really cool! I'll use this later when i'm learning image manipulation :D
