Thread: [Windows goes to sleep mode](#)

Hopsin - June 27, 2015, 4:18 pm

Hi, each time I close my laptop lid, it goes to sleep mode after several minutes.

I use windows 8.1 64 bit, How to fix this? I have tried this with and without charging power, with and without battery.

I have tested and setted with every existing plan (old,existing and new) I have. Still same problem.

Note: I use SSD (samsung)

Does it go to sleep mode or hibernation?

Hopsin - June 27, 2015, 4:27 pm

I am not sure. How to check it?

archangel.dmitry - June 27, 2015, 4:49 pm

Usually when it comes out of hibernation, it is going to say something similar to "Resuming...". But I am not sure about exact phrasing.

I think It says resuming windows. Not sure, either way... can you provide some kind of solution for both situations ? ?

archangel.dmitry - June 27, 2015, 4:56 pm

You can disable hibernation in "cmd" as Administrator, type the following:

Quote:powercfg -h off

Have you updated GPU drivers recently without reboot?

Hopsin - June 28, 2015, 9:18 am

(Jun 28, 2015 09:11 AM)archangel.dmitry Wrote: [\[CITE\]](#) Have you updated GPU drivers recently without reboot?No. I have installed those drivers around 2 weeks ago but I have rebooted.

This problem occurred several months (2-3 months)

Do you have unrecognized devices in the Device Manager?

Hopsin - June 28, 2015, 12:43 pm

No I don't. This didn't happen with windows 7 ultimate... Could it be bug?

archangel.dmitry - June 28, 2015, 2:10 pm

It could be, you can try putting the computer in performance mode but it will reduce battery life.

I have tried all modes and plans. Nothing worked, same situation

archangel.dmitry - June 29, 2015, 10:31 am

I am not sure what to tell you. You could change power behavior of network adapters.

I have tried almost everything. I am going to do some fresh install in few hours. I need this to be fixed, hopefully it will be with format..

Thanks for the effort through!
