Thread: [InstaGrowth 2015 | Instagram Like Bot | FREE](#)

TearProgrammer - June 28, 2015, 3:09 am

So yesterday I spent hours looking into the Instagram API and how I could implement it into VB.NET

Long story short I gave up, used loads of timers and webbrowser control and managed to get it to work... Kinda.

The program IS NOT COMPLETE. It is extremely buggy and I genuinely cannot be bothered to spend any more time on this, therefore I am giving the source away. Also the coding is really really sloppy- I ran out of coffee fast. Also I can't post pictures of it- below 50 post count.-!

If you do use this source at least give me some sort of credit; I did spend hours trying to get the damn thing to work! ???

Also credit to iSynthesis for the theme.

Also credit to iSynthesis for the theme.How do I open the designer.vb in view?
I can't see the form I just see the code for the design.
It won't let me open the project file.

I can't see the form I just see the code for the design.

It won't let me open the project file.

You open the solution file (*.sln), not the .vb file.

OP, the reason this is buggy is because you don't wait for a page to load, but rather use a progressbar to determine when you perform an action.

Yeaaaah, I knew I was doing it all wrong from the start, I'm real sloppy with vb aha! But hopefully it'll be of some sort of use to someone else:~)

AustinPape10101 - June 28, 2015, 6:52 pm

I like the idea and effort. I'll grab this code and see what I can whip up ??

SyyK - June 29, 2015, 4:44 am

I've made a full recode for this.

Will be released soon.

Used webrequests, rather than webrowsers ;)
