It's .co.uk my friend, i believe the config also had capture but not used it in quite some time.

I'd love to take the Netflix config but I have no clue where to find a HQ Proxy list & Combolist that's the thing. All Proxies are pretty much public and the combo lists "Email:password" are outdated that's the thing :/

Sent out like 25 configs & all I ask for is people to post saying i'm legit but since people are just leeching the private configs I'm wont offer them. Sorry guys! Maybe i can reopen this at a later date.
