Thread: [Webbrowser Proxies/ tabs?](#)

Lexxi. - June 30, 2015, 8:00 am

so ill try to explain brief and clear. i want to create a webbrowser with tabs, each webbrowser tab (page) needs to have a different proxy. i play a online game which when you open it again in a new tab it disconnects however with a proxy it doesnt because its a diff ip. i need each tab of the webbrowser to have a diff proxy so i can run the link multiple times (multiple accounts) i have made a 1tab webbrowser with a proxy set on it but i want more tabs on it which open the same page but with a proxy so it opens with a diff ip. can anyone help? (A Different Proxy Set For Each Tab)

+Haze - June 30, 2015, 8:03 am

Just visit a different proxy website on each tab?
