Thread: [\[KEYLOGGER\] Free FUD Keylogger | FTP | Easy | Trusted members](#)

Brasil - July 2, 2015, 3:58 pm

I have a FUD keylogger that can be modified to upload logs to anybody's FTP server.

If you don't have an FTP server then you can check out [wikipedia's comparison of free web hosting services](#) and pick one with FTP.

The virustotal is currently clean, but I am sure this will change with time.

But why? All I have to do is modify a couple values in the source code and compile to give this out. It isn't very much work at all for me.

To prepare to apply 1) Be a trusted member.

2) Get an FTP server.

3) Make an FTP account with write permission on your server. It needs a username and password.

4) create the file yourdomain.com/windows.log on your website.

To apply: Fill out the form and PM me. Feel free to vouch in the thread once you get the keylogger.

FTP username:

FTP password:

domain name (example: "myname.freehost.com"):

Any thing else you want to say (example: "I will love you forever"):

I'll give you a couple more easy things to do and all that will be left for you to do is spread the executable I give you.

It produces this error for the user so they don't get suspicious

[img]http://postimg.org/image/d9ses81lt[/img]So you want my username and password for a FTP server, and you want me to accept some exe that you will send to me?

Now I see why nobody wants it. You wouldn't run the EXE on your machine though, you would give it to other people to run so you could keylog their machine.

Awww you gave me negative rep :(

Don't use virus total because your nice clean FUD file will quickly become detected.

Also I advise members to not use this considering that OP can just login to your ftp/backdoor the exe.

Also I advise members to not use this considering that OP can just login to your ftp/backdoor the exe.The exe is a backdoor, and you make and FTP server for the keylogger only so it doesn't matter if I go into it or not.

If I didn't use VT then somebody who I give it to would go and put it up there eventually.

(Jul 4, 2015 02:36 PM)wanderlira Wrote: [\[CITE\]](#) it's get screenshot of virtual keyboards?No it takes everything they type and uploads it to a file on their server.

Blusspider - July 17, 2015, 2:30 am

I would like to know more about your Keylogger.

akande202 - July 21, 2015, 5:20 am

Please, i need to the best keylogger and also cryper that works perfectly.

SurpriseArts - September 2, 2015, 12:10 pm

Pls i need this leylogger is very gut ahhaha
