Thread: [Thread does not show new replies](#)

Tekkie - July 2, 2015, 7:27 pm

It seems that my thread has stopped at page 16, and will not show any new replies.

I noticed that I could see from my User CP that someone had posted on it, yet when I went to the thread, I could only see up to page 16 (my most recent post). Viewing the user's posts from their profile also shows what they said, so the post hadn't been deleted.

I received a PM shortly after saying that they were having issues accessing the recent posts of the thread, so I have reason to believe this isn't an isolated issue with my machine.

I'd greatly appreciate any input or suggestions.

My thread is located here:

I've seen this happens with threads before. Usually it doesn't show until they are a lot larger though. You might just have to create a new thread.

Roger Waters - July 2, 2015, 7:38 pm

Try making a test post on that thread. I just made a post and it disappeared. I believe if you post again it should appear.

Some other workarounds for this issue is by re-creating the thread entirely or by changing your "Posts Per Page" option on the [Edit Options](#) page from Default to '50 posts per page'.

The reason why this is occurring is due to a cache issue with MyBB, which happens when threads receive a lot of posts, or have had many posts deleted or junked.

Tekkie - July 2, 2015, 7:38 pm

It looks like the issue has been resolved now. I can see your test post, Roger Waters. Thank you kindly.

If either of you that posted in this thread would like a free 4 GB Linux box in North America or Europe, let me know.
