Thread: [\[PRIVATELY CODED\] \[FUD\] OFFICE 2003 - 2013 EXPLOIT \[EXE 2 DOC\] \[TUTORIAL\]](#)

Purple Drank - July 4, 2015, 8:11 pm

[Interested in a private version coded by me for you?](#)

Tutorial: <https://hackforums.net/showthread.php?tid=4893557>

I don't have time to sell crap apparently and I'm just giving up on even trying. Instead I'll give this out to you for free and you can do what you want with it. I've only tested it on Office 2013 Word on Windows 8 and it works flawlessly as you can see in the video:

[Video: <https://www.youtube.com/watch?v=DOT0kAO3RPw>]

Please understand that it is adf.ly and if you could disable your adblocker, that would be much appreciated. Keep in mind that I did spend my own time making it FUD and making sure it works in hopes of selling it, but I fail at life and this is my way of saying fuck it.

Please be sure to reply to the thread to keep it alive! Show your appreciation!

The Goods

ThisDocument: <http://adf.ly/1KGzFp>

ESPASPPHLSO: <http://adf.ly/1KGzMl>

Note that "ESPASPPHLSO" is a class module and will need to be create manually. Just make sure it looks something like this screenshot: <https://i.imgur.com/ReOD0sY.png>

hamid147 - July 5, 2015, 12:21 am

tried this and it did not work bro

Purple Drank - July 5, 2015, 3:31 pm

(Jul 5, 2015 12:21 AM)hamid147 Wrote: [\[CITE\]](#) tried this and it did not work bro

Care to inform me what the issue seems to be?

LogitechCamMan - July 5, 2015, 3:33 pm

You're kidding right... You are using kaspersky? I had that for a day and it would even detect simple batch code saved in a notepad file, it was horrible at detected real threats. Try this test with ESET Smart Security 8.

Purple Drank - July 5, 2015, 5:12 pm

Why don't you try testing it with ESET Smart Security?

Because I want nothing on my system that has to do with any type of exploits.

hrocd - July 5, 2015, 9:28 pm

it this macro or silent exploit?

Purple Drank - July 5, 2015, 11:18 pm

I'll get right on making another video showing that this free code that I've created and given to the public is able to bypass NOD 32.

Apologizes for not being up-to-par.

Madlife - July 6, 2015, 12:22 am

Good job.

Did you make an attempt towards changing the "enable macro" popup ? I've seen people able to change it to a simple "Cancel" button and if you do click on it, you get infected. That was pretty impressive, but I have no clue how they managed that or if it was even real.

sobolek - July 6, 2015, 5:39 am

Its Macro. Tested and always "enable macro" button..

nezha240697 - July 6, 2015, 6:08 am

vouch your effort man good job

Purple Drank - July 7, 2015, 2:36 am

Thank you.

It's default in Office 2013 for it to do such, not sure if older versions may have a different way of asking the same question. What I do know is that there are silent versions of this very same exploit, but they do cost money and are often patched before you're able to get your hands on them. Although it maybe patched, it doesn't mean it's not useful. As many people around this forum do still find great use out of patched exploits, especially the silent versions.

(Jul 6, 2015 05:39 AM)sobolek Wrote: [\[CITE\]](#) Its Macro. Tested and always "enable macro" button.. Yes we have gathered this information from not just from the video, but previous posts to yours as well.

limpopo - July 9, 2015, 12:26 pm

i can't thank you enough bro, you are really awesome, and the most amazing part is this is still fud, God bless your work bro.. much love.. (no homo tho :D)

poBooM - November 20, 2015, 5:12 pm

thanks for the awesome tutorial !

kickrocks - November 20, 2015, 5:59 pm

good job dude and an amazing share to the community , even with macro it is an awesome way to spread

danielha - November 21, 2015, 9:09 am

I'll get right on making another video showing that this free code that I've created and given to the public is able to bypass NOD 32.

Hizagashira - November 30, 2015, 2:50 am

thanks a lot for share this!

It works perfectly also with word 2010!

Only remember to remove the strings after "End Sub" from code to avoid syntax errors

very good job!

I'm really interested in a private code, but i cannot PM you... please provide your skype contact

somenormalguy - December 1, 2015, 10:38 pm

fuck this thing it's working for me very well

i just wanted to test it my self 127.0.0.1

now i can't even find my own processes
nor kill my self via RAT

Sad but this is cool then any paid exploit

thank you bro

coocochoi - December 2, 2015, 8:32 pm

I am unable to PM you.

I will like a private doc exploit that's FUD. Kindly let me know if i can get it and how much is it ?.
Also your terms of service.

skype101 - December 13, 2015, 3:29 pm

OP is banned, therefor you cannot. There are several other topics out there but most of them are
without software as far as i know

cc0de - December 13, 2015, 5:43 pm

Thank's dude for this tutorial.
