Thread: [Find hidden Facebook email? \(NO YAHOO\)](#)

HomieQuan - July 4, 2015, 10:36 pm

Anybody got a clue how to do that? Even on Yahoo it's hidden. I would even pay you if you could find the email.

Nomad.Null - July 5, 2015, 12:26 am

What's the facebook profile? I'll see what I can do.

xmagerz - July 11, 2015, 1:34 pm

Send a mail to her facebook e-mail address, a.k.a target@facebook.com

If you get a response, you got the real mail.

What I do is send something like:

"

hi there, this month's utilities numbers are x98edj and xij932d (implies she's the owner and Im living there in rent)

Sorry for the delay

Would appreciate if you could confirm you got it,

THanks,

Fake name

"

but you can do whatever you like. Just maximise your chances by not making it look spammy, about money, etc.

How does that show you the real e-mail address? The e-mail that is registered under the FB

account obviously isn't <username>@facebook.com. Unless by sending an e-mail to that address shows the real e-mail? I don't know. It's hard to understand what you're saying but this is how I look at it.

xmagerz - July 11, 2015, 2:11 pm

If you get a response, the response shows as coming from the real address, not the @facebook.com one. I tested this personally.

Although not a lot of people have @facebook.com addresses displayed either

Other methods:

2. you can try and guess it in the facebook search bar. If you type a mail in the search bar, it will show you the person. So you can try mike.smith@yahoo.com, mike_smith@yahoo.com, mikesmith@gmail.com, etc.

You can use this together with the facebook "forgot your password". Forgot your password tells you: the first and last character of the mail address and how long it is. So if forgot shows you m*****8@y****, you can look that mike is born in 88 and try to guess his address: mikesmith88@yahoo.com

3. Figure out who he is sending mails too. If the target is in college for instance, you send a friend request to all his classmates. You get their mails via yahoo. You then try and recover passwords for all those people. It's not really easy to do it, takes a lot of time and you can't be sure of success, but it's not that hard either really. If they have security questions you can use their facebook to find answers.

4. Just figure out a smart lie that will get you their mail address. WHICH is probably one of the best methods.

Like, if they're in college: Make a fake facebook, add them, and say something like "Hi I'm a recruiter for a company called Bullshit Inc and we're looking for young and future grads for internships. Would you be interested in having a look at our offer?

Great! I'll send you a mail. What's your address?"
