Thread: [How to access HackForums or any 'vpn' banned site on a VPN](#)

Dunkin' Donuts - July 5, 2015, 3:02 am

Run CMD as Administrator. (Important to RUN it as a administrator)

Type in "ipconfig" to find your default gateway.

<https://imgur.com/zpwcopG>

Then type in "ping Hackforums.net" (or any site your banned on)

(Press control c to stop pinging once its pinged) put the ip you got from pinging in your mind.

<https://imgur.com/bHPZniB>

Then type in "route add" then ip that shows up when its pinged, then your default gateway ip address.

<https://imgur.com/BVskyNy>

(I already did this, so that's why i get the route error) Smile

So like this:

CMD:

```
>ipconfig
```

```
>ping hackforums.net
```

```
>route add 190.93.250.145 192.168.1.1
```

```
"Ok!"
```

```
>exit
```

Im not sure if anyone has posted any tutorials like this before. If you guys tell me that someone else has posted anything like this ill just close the thread.

Peace!

Kokomikta152 - July 5, 2015, 7:09 am

nice method brother, thanks for sharing.

#YOLO - July 5, 2015, 7:13 am

There is only one problem that could come to my mind, and that's interference with cloudflare(or whatever anti-ddos hf uses). It may use multiple IPs, or prevent direct IP connections, which would sort of break this.

thinkgyman23 - July 5, 2015, 11:11 pm

Does that actually work??? ?

Dunkin' Donuts - July 6, 2015, 3:29 am

Still you can do this very easily. Go to a website that resolves the ip's of hackforums. It should give you 2 ip's. Run cmd as admin and run the following (you have to run each ip on a separate command! If you want to run many ip's make a notepad and add these and save it as a batch file):

Code route -p add "IP GOES HERE" mask 255.255.255.255 "GATEWAY IP"

You can get your gateway ip by entering "ipconfig" into cmd.

240sx - July 6, 2015, 6:56 pm

Not worth if your VPN is known and if it matches any scammer IPs you'll probably get banned and rf'd. Omni mentioned it in one post and F8 too I believe. Nice tut though.

I don't get what you are trying to say here. This method lets you access VPN banned sites while still connected to a VPN. But this is not by actually letting the VPN IP access the website, it just routes all traffic with the ip's that you routed, to be accessed through your NORMAL ISP'S IP! For example your actual IP is 101.1.1.1 and you VPN IP is 55.5.5.5. You connect to your VPN and all the websites that you surf will be accessed using 55.5.5.5. However once you route the IP's of hackforums.net (there are two so you need to route both of them), when you access HF while connected to VPN, you will be accessing hackforums.net with 101.1.1.1. Remember, this is still while you are connected to your VPN (it is just for lazy fuckers who cant be bothered to disconnect VPN when they need to access HF). This is what routing essentially is. So no, you probably cant get fucked and matched coz u r accessing HF on ur actual IP.

Please correct me if I am wrong here :P

fogstone - March 30, 2017, 4:44 pm

I'm gonna make a version of this tutorial in Linux using Ubuntu. I've almost got Ubuntu working with my VPN connection. I just need to follow a newly made and updated guide and haven't had time to do so. But then I'll figure out this really quickly. It's probably not hard but worth writing, at least for n00bs.

rana192 - March 30, 2017, 8:42 pm

Gooood Methough bro I apricots you

LowieLadz - March 30, 2017, 10:49 pm

Very helpful, thank you my good sir.

GermanWings - April 1, 2017, 1:13 am

mhh why dont you use a reverse proxy ?

triggabyte - April 1, 2017, 10:34 pm

This won't actually hide your IP address from Hackforums; it's adding an exception to the routing table to route your traffic from your home IP to Cloudflare DIRECTLY, bypassing the VPN. Proceed with caution.

@Lion - April 4, 2017, 11:07 am

Does this actually work? Thanks :)

0b170 - April 8, 2017, 8:25 am

when i'm banned from a website i use tor lol

STRILEXLIVE - April 11, 2017, 2:29 am

Looks working, thanks mate! I will check =)

ogga - April 13, 2017, 6:24 am

Do you have a better method? Please share, thanks :)

neb535 - April 22, 2017, 5:12 pm

will check this out, posting to visit later

Chantalletje123 - April 29, 2017, 6:49 am

Thank you for this i will try it out

SavagedGod - April 29, 2017, 5:28 pm

Thanks for the method! Might try sometime soon.

Bobistutorials - May 3, 2017, 5:18 am

good job bro :) nice tutorial and yea you can also do for Linux/Ubuntu

Evoblade - July 24, 2017, 7:41 am

make one yourself man it's really nice

bmoney - November 2, 2019, 10:44 am

can i get the e book on money making pl0x
