Thread: [Youtube Ratting Essentials- The Need To Knows About Youtube Ratting](#)

Louis C.K. - July 5, 2015, 6:24 pm

This is not a tut. This is some pure good info's if you want success ratting on YT. I've seen many of you facing YT video take down due to spam or dangerous links. If your video survive these restrictions, your video will stay up a long time or even forever.

Here are some tips to make your video stay up longer and defeat a YT take down:

-Unique video including unique content. From unique I mean, a video that's never been uploaded to YT before. So create your own video, this will last the longer duration, even flagging won't be able to take it down.

-If you don't have the skills to make a video. Go grab a video from another site other than YT. Popular video upload sites such as dailymotion, vimeo, metacafe. After grabbing any video from any site, make sure you spin the md5 hash before reuploading to YT.

-If you must use a YT vid. Modify YT content to the fullest. If you must use a video from YT, alter the content to the fullest, by adding visual effects, slides, artwork, ect.

-Don't add blackhat keyword to your title or description. Use whitehat keywords to replace the blackhat one.

Example: Riot Point Hack Generator =====>

How To Get Free Riot Point- claim your free riot point-(no, hack, generator, bots)2015

see how I got rid of the blackhat keywords such as "hack", "generator" and add them at the end of the title. This trick is useful to include bh keyword without linking them to your title.

-Not recommended using game hack tool videos/niches (candy crush hack tool). Those videos gets take down the quickest, because a lot of spammers use the same video and YT take them all down at once.

Use niches as whitehat as possible, you will find some as you scout through the web/YT. Here are some semi-blackhat niches, the best ones out there, in a form an application but not blackhat enough for YT to take down:

-survey bypassers

-rar crackers

-pdf pass crackers

-YT boosting bots

-Phone Pass Unlockers

-mainly any tool that people are looking for on the web. I hope if you guys find some, please share it here.

Death of a YT video:

when a YT video gets taken down, there's not you can do about it except for appealing the decision. You can only appeal the decision using limited about of words so make your case as detailed as

possible. I've appeal all my take down vids and revive 75% of my vids. Once a vid gets revive, it's hard to get take down again. Leaving you success infections.

I will release more info about appealing decision in my next tut. And more tips on how to revive a video. But first I would like you guys to check out my signature where I provide expert spread mentoring and setup, methods are like no other and you will get exclusive tips on spreading. Also about that whitehat spreading niche list, I would like you guys to comment on more ideas below, because I might just create a free video for you.

Jinu - July 5, 2015, 9:19 pm

Thank you for the information. It may useful for the beginners one who is trying to spread his/her server. Even I have learned something from this information.

Niko - July 5, 2015, 10:07 pm

Very informative, Thanks for the info.

NotoriousWalrus - July 5, 2015, 11:45 pm

I personally will NEVER ever steal a video made by someone else - even if I know they made it purposely to infect someone. Good tutorial.

What I'd do (If you are willing to target noobs at computers then this is exactly what I would to in addition to this tutorial)

1. Unique content (YouTube Avatar - unique being already stated in the tutorial.)
2. Create a nice looking GUI in VB if you can its quite simple :P - maybe like free Microsoft Office 2013.
3. Make a folder with useless DLL's and pump them with bytes.
4. Put your program there and record it on a VM - Install shit on your VM before doing it to make it more believable.

And your done - just an addition to this tutorial. And I like that whitehat instead of blackhat it really did help me out because I kept on spreading blackhat and yeah couple kids downloaded it but not really anyone else.

Forgot to add only post at most 2 video per account. Because if your channel goes down, all your video will go down along with the channel.

dark.star - February 4, 2016, 10:01 pm

Awesome tutorial... Thanks

DingusMonster - February 5, 2016, 4:05 am

YouTube spreading is ok if you target the right audience. Torrent spreading is easier

?MIN?M - February 5, 2016, 5:07 am

I didn't even know I could be ratted with youtube vids. fuck lol

Red_World - February 5, 2016, 9:41 am

You need to get accepted first to upload a torrent..

You need to get accepted first to upload a torrent..

Yes, but if you have a decent crypter, you'll last longer on the site.

Pandz - *August 19, 2018, 12:07 am*

Thanks for the info very helpful

Fire_Star - *August 19, 2018, 8:14 am*

Thanx OP, This is very informative and useful.
