Thread: [Problem after new amd catalyst driver update\(Out of Range\)](#)

Chief Sosa - July 10, 2015, 11:56 am

Hello guy,

So as you may know yesterday was released a new update for amd catalyst.

I decided to update the driver and i started the process. When the update finished my screen become black and it showed:

Pic of the text that shows up - <https://i.imgur.com/C5E7B6k.jpg>

D-SUB

Out of Range

75.0kHz/59Hz

So i tried some stuff. Like to deinstall the driver from safe mode with DDU and without DDU and install it again - it still showed the same text.

I tried to install the driver from the disc(the one i got with the video card) and it still showed that text.

At the moment i am using the intel gpu.

Any help?

My video card is Sapphire Radeon R9 280 and i am using Windows 7.

Try using a different port such as DVI or HDMI and see if the problem persists.

Alright, i will try with hdmi.

Edit: Goddamn, no hdmi port on the monitor...

Try disabling the integrated graphics through your BIOS once you finish installing the AMD GPU drivers.
