Thread: [FreeResolver Skype Resolver Source](#)

Deadline Em - July 10, 2015, 1:29 pm

Hey guys, I'm giving out a fresh and simple skype resolver source, nothing majorly fancy it all works.

SOAP. on hackforums, owner of GoResolver (link in my signature) has asked me to create a simple, free source for everyone so he can give it away on his site (for free obviously)

Any ideas, suggestions, etc are appreciated.

Before downloading, NO there is no database, its driven by API's which can be found FREE at goresolvers website.

I will however, add a database for \$20 (with database driven pages) fully set up for you if interested but again its only if you want.

Anyways thank you for your time, The source link is below. An alternate link is in my signature. Enjoy! ????

<http://www.filedropper.com/freeresolver>

actully your link has stopped working

<http://shut-em-down.com/Download/FreeResolver.rar> can you pm me the code?

My apologies, I forgot i removed the file because it was missing the resolver page (accidentally hit delete in FTP lol) its being reuploaded right now

Bump** Just want to get this out there, not many people have seen this.

Deadline Em - September 9, 2015, 10:45 am

Bump*** Anyone who hasnt seen this, its great for starters! Feel free to use it!

Just wanted to point out there is vulnerabilities in this source. So I wouldn't use personally.

?

Theres nothing in the source except API and php scripting, its nothing majorly set up just something for people to use for skype resolvers, who would hack a free resolver using a free API?

A Powerade - October 1, 2015, 1:16 am

Only problem I've seen with this is that you have to find your own API to use.

This source is given for free from goesolver, i created it, the free api is <https://goresolver.com/free.php?username=>

Or, you can get an API from <http://iptoolhub.com/> by clicking on the \$5 Lifetime API button

Which is a fantastic API with great uptime and ALOT more features

Ah, okay. I just went and looked at the code where the API is and it didn't have the URL in there.

Yeah, as per request from SOAP. on hackforums, he didnt want the API in the source when it was released, he wanted people with at least a little bit of coding knowledge to use it.
