Thread: [Locate image from website](#)

mariuspeter - July 11, 2015, 12:03 pm

Hi

I am all out of ideas, Here is a link:

kb.dk/image_client_static/viewer_single/?src=online_master_arkiv_6/non-archival/Maps/KORTSA/RESEN/re000045.tif

It is an image shown in somekind of a flash/swf viewer, you can zoom the image pretty much, but you cant download it.

Now I wish it in full resolution, and my teory is that it is there somewhere on the site, so the swf viewer "just" calls for it on command. And for some reason I also belive that it is just a matter of knowing the right url to the image.

But after hours of guessing and testing, I am running out of ideas of where the image is located in full resolution.

I have also tried Dirbuster, to see if that would give me any location ideas, but no luck there either.

The closest I got was this url/size:

kb.dk/imageService/online_master_arkiv_6/non-archival/Maps/KORTSA/RESEN/re000045.jpg

But it is obvois when you zoom, that it is NOT full resolution.

I have a few coulpe of images from that sits that I need, so if anyone of you have a working method to find the image files in there full resolution, then please help?!

Many thanks
Marius

Just out of curiosity, why are you spending hours on a single picture? Seems a little overkill, don't you think? ;)

Eh, you might want to take a look at the picture before you call it a nude ;)
