right, when i build a stub without compression and then run it in sandbox i get no connection but when i do UPX compression i get a connection with myself? what is the reason for this?

can someone also test the no compressed one for me with a bot?

Niko - July 17, 2015, 2:24 pm

That is very strange... If I had any bots left I would let you test it, but I'm out atm.

Armada - July 17, 2015, 2:26 pm

Shoot me a PM with a link to the binary. I can test it for you.

i am stuck because of this lol

should i try MPRESS compression?

ze-slade - July 17, 2015, 2:29 pm

No compressions should be used, if you want to test on yourself use the dns 127.0.0.1 and for ratting people or people off your network use your dns or your ip adress.

And use this to test your stub that's unencrypted.

anubis.iseclab.org/?action=home

I've never heard of that, when I used dc I never did compression though.

k?'rlzm? - July 17, 2015, 2:49 pm

well it appears that it must be just a sandbox thing,,

Finestquad - July 17, 2015, 2:50 pm

Darkcommet is not good as before outdated. You can use Cybergate working really great!
