Thread: [How to prevent your self from being key logged](#)

Mr.Luce - July 18, 2015, 9:58 am

What is a keylogger? A keylogger is a type of surveillance software that has the capability to record every keystroke you make to a log file, usually encrypted. Every type of keylogger is dangerous as they can record your keystrokes, track your activity and can record the open sites. By this your any account can be easily hacked by the hackers. These keyloggers can detect your bank accounts passwords too. So better is to be safe from these type of programs that can harm you a lot. So we are here with a method for How to Protect Yourself From Keyloggers. With this method you can protect yourself to much extent from these keyloggers. So just read out all the tips below.

1) use key scrambler app: Keyscrambler is a nice app that encrypts your keystrokes, as you all know that keylogger records the keystrokes and if those keystrokes get encrypted then keylogger will always get wrong value of keystrokes and your all personal information in your keystrokes will get safe from the keyloggers injected by attackers on your PC.

#2 Use a Good Antivirus

A good antivirus is the best way to be secure from these keyloggers as a good antivirus can easily scan out the infected program in your computer and helps you in protecting your credentials. So we prefer you to use the paid antivirus in your computer rather than rushing to the freewares that do nothing in computer except consuming your computer memory.

#3 Use Antilogger

This program can detect a keylogger in your computer and then you can completely remove it from your computer. There are lots of antiloggers are available today but you must use best of them as keyloggers are of many types that even a normal antilogger can't detect. So we suggest you to use the Zemana AntiLogger which we consider best on the user rating and reviews.

Download : [Zemana AntiLogger](#)

#4 Cover your webcam

There are many computer viruses are developed in the form of keylogger that can spy on you so here best option is to cover up your webcam to secure yourself from these type of attacks. You can cover it with any bandage or a color tape or whatever you wish.

#5 Avoid Using Public Networks

In public network you can get easily hacked by the keyloggers or the spy program that get installed on the router to access the user data connected on same wifi network. So better is to avoid use of public network as there is always a risk of keyloggers being installed on your computer.

#6 Use Sandboxie In PC

Today almost every keylogger is capable of editing your system setting and which can harm you lot. So you must use this app in your PC which detects the app that can perform changes in system settings and help you to remove them all from your computer to get safe from such malicious programs.

Download : [Sandboxie](#)

#7 Use a Good Antispyware

While regular browsing on internet your computer gets lots of spyware which is the other alternative of keylogger and does the same work as the keylogger do. So better is to choose out the best spyware for your pc to get secure from these.

#8 Scan File With Multiple Antiviruses

If you find any of the program not installed by your then quickly scan out that program on online scanner that scan files with different antivirus and then give you the result about the file that it is safe to use or not.

Life Goes On - July 19, 2015, 4:58 am

Nice tut dude, it will help alot.

Mr Whiskey - July 19, 2015, 5:10 am

<http://www.techhacks.org/how-to-protect-from-keyloggers/>

Nice cypypasta.

?Syria - July 19, 2015, 5:54 am

Or you can always just not download random things, btw this not preventing this is just protection against them

KawaiiCharizardeh - July 19, 2015, 7:01 am

Nice tutorial, doesn't really matter if its copy+paste

Mr.Luce - July 19, 2015, 9:34 am

I forgot to link techhacks but I post for who didn't know

Nice cypypasta.
EL OH EL.

Hate people that do this. Imfao

Critique - July 19, 2015, 9:36 am

The one way I prevent myself is don't download something that looks sketchy.

That's just me but I do try my best to avoid viruses.

Datageni - July 19, 2015, 11:41 am

I find it funny when people cover their laptop's camera because "NSA can see everything", when they don't touch their phones' camera. It has nothing to do with this topic, I just find it funny.

OT: Nice tips, thanks for sharing this.

I find it funny too. ?

OT: You mentioned good programs to prevent keyloggers. Don't download anything fishy, scan everything you download, and you should be mostly good.

Archaedas - July 20, 2015, 12:06 pm

Great tut tut.

Remember: There is nothing wrong with being paranoid.

Just because the world is not out to get you doesn't mean there isn't some who is.

ZuGgY - July 20, 2015, 12:09 pm

Just be smart and don't visit sus sites or download sus programs, etc.

But anyhow, I use KeyScrambler, really nice program.

Fiddle?[™] - July 20, 2015, 12:11 pm

I remember I used to use a keystroke encryption. However, when I played Minecraft I could only press one key at a time for movement and it was really pissing me off. After several days of suffering I disabled it (don't remember which program it was) and I stopped having that issue.

gausho - July 21, 2015, 10:55 am

thank you for this information man!

sophia727 - July 21, 2015, 1:53 pm

Very useful information and thanks for sharing

Talu - July 21, 2015, 2:43 pm

Great tutorial, thanks for the share.

Mr.Luce - July 21, 2015, 3:21 pm

Appreciate the thanks guys, just doing ma best to share awesome tuts on HF

PirateSec - July 21, 2015, 3:21 pm

Or you just dont download shit that's sketchy

supreme00. - July 21, 2015, 3:21 pm

or maybe just use your brain
if you can

cry4hope - July 23, 2015, 6:57 am

you forgot to put wireshark on that list or am I the only one that checks my network traffic ;)

Kokainee - July 23, 2015, 2:34 pm

Thanks for the post, it helps alot !
