Thread: [Windows 7 Won't start/Freezes `](#)

Madam X - July 18, 2015, 11:35 am

Hi all, so currently I am typing this in safe mode.

Basically my computer wont do anything whenever I load it up it will boot and show my desktop sometimes (sometimes it will just be a black screen with the mouse) other times It will just stop responding and

I have a decent enough computer where it shouldn't be doing this.

i5 processor
8GB ram

I was looking online and I found a program Sadly it cost money which I just simply cant shell out the money for right now. If anyone has any other programs or any info please share. I'm getting really worried.

<http://www.repair-your-pc.net/>

I also ran a full malware bytes scan and it didn't find anything either.

I think it might be a registry error.

So the program let me scan it for free but sadly is going to charge me to fix it :/

Here is the overview.
Spoiler ([Click to View](#))

Here is more details about the Registry errors.

Download [Farbar Recovery Scan Tool](#) and save it to your Desktop.

Right click to run as administrator (XP users click run after receipt of Windows Security Warning - Open File). When the tool opens click Yes to disclaimer.

Press Scan button.

It will produce a log called FRST.txt in the same directory the tool is run from.

Please copy and paste the log back here

The first time the tool is run it generates another log (Addition.txt - also located in the same directory as FRST.exe/FRST64.exe). Please also paste that along with the FRST.txt into your reply.

Now the logs are here we must wait for a trained member, I cannot create a fixlist for you as I'm still trying to get into training and wouldn't want to mess anything up.

Hi Madam X:

I see you have a problem and need help.

I have also see you already posted your logs.

Very good, For this is the first step in getting your issue taken care of.

Though it seems a train adviser has not yet come along to help.

I myself am also in training and can not give advise on Malware Removal.

But i can suggest a few things to help you speed things up with your issue.

Option 1:

What I can do for you is this.

Please PM both here on HF.

[Charmz](#)

[Knautschtabak](#)

Both of these members are our teachers.

In your PM link this thread and tell them you need help.

Tell them Nuworld sent you to PM them.

Option 2:

If you do not get a reply from the members i stated in option 1.

You can always go here: [MHE](#)

This is where the experts spend most of there time lately for they are busy teaching.

Madam X - July 18, 2015, 6:45 pm

Thanks for everyone's help I have fixed it :)
