Thread: [DarkComet connection shows only in socket](#)

sonikshot - July 19, 2015, 10:11 am

Hello! I have port forwarded everything correctly, i checked port on canyouseeme.org and it works well. When i infect myself with the rat, it shows at "estabilished" in socket, but nothing in connections. Could you help me please?

I'm using 5.3.1. Thanks in advance

Adderall - July 19, 2015, 12:45 pm

Is your dns working or the IP you filled in?

Is your darkcomet listening to any ports?

Do you have the same password for your server & client?

Watch a darkcomet tutorial and try it again if you can't solve the problem.

the wolf of blockchain - July 19, 2015, 12:46 pm

might be a port problem. Check on canyouseeme.com

sonikshot - July 20, 2015, 2:23 am

Everything is ok, dns working, canyouseeme says syccess, i did everything correctly. This isn't the first time i use darkcomet , but i don't know what to do. In socket section it says listening to port 200 and connection estabilished to__ port 200

Anyway, it doesn't show up in my connections list. I don't have a password for the rat

You must type in network settings 127.0.0.1

Spadak14 - November 1, 2015, 11:32 am

I have the same problem and i dont know how to fix it :/

DamienVC - November 1, 2015, 11:50 am

cough stop using DarkComet?

It has unpatched exploits & vulnerabilities

Switch to Babylon

SilverNET - November 1, 2015, 2:33 pm

Try another port besides 200. Maybe something between 20000 - 52000
