Thread: [KNWB Monitory Seed - \[VB.NET\] / PHP Monitor w/ Screenshot](#)

GyroErbin0 - July 20, 2015, 11:49 am

I was planning on selling it but I figured it should release this so that everyone can make use of this!

Code Hello fellow members,

Today I will be presenting 'KNWB Monitor' a starting seed of an amazing flower.

Questions and Answers

[code]

What is KNWB Monitor?

KNWB Monitor is a remote application that I coded from scratch to monitor computers that have been given right to monitor.

In what language is it constructed?

It's constructed in mysql php and visual basics.net requiring only framework 2.0

What are the functions of 'KNWB Monitor'?

Are there working functions included in the source?

Yes, there are basic functions that work without any problem!

Is it fully undetectable?

I have not scanned it. I only code for the functions hence the reason I left 'stealers' out of my source code.

How much kilobyte is the server?

Approximately 19 - 20 kilobyte.

Can I hire you as a private coder?

Yes, that should be a possibility.

You can check out my recent works by looking me up!

Do you have any images of the 'KNWB Monitor' ?

Yes, I will be posting them at the end of the Questions and Answers

What do you mean by "Seed of an amazing flower" ?

What I meant to say is that I will be selling you a core of my product so you can manifest modify and do as you please.

This was the end of all questions and answers.
Do you have more questions you would like to ask?

Don't hesitate and send me a private message!Recurring screenshots will be found bellow.
