Thread: [FireFox Theme](#)

WhyWork - July 21, 2015, 6:42 am

Can anyone make a theme like the new FireFox settings?

SaketSaket - July 21, 2015, 6:53 am

We theme creators can do it but we charge ;) someone might create it for free... ;)

Ninja - July 21, 2015, 6:57 am

Someone might find it a good idea and give it a shot for free, but the result will most likely not be the same. Or pay someone to do it for you and get almost an identical copy.

+Haze - July 21, 2015, 7:17 am

HawkHF could do this. He's a very good GDI designer.

Hawk HF - July 21, 2015, 7:40 am

I got excited at first as I thought you had created the theme in the images.
But then I realized they were screenshots of FireFox. (I don't use FireFox)

(Jul 21, 2015 07:17 AM)+Haze Wrote: [\[CITE\]](#) HawkHF could do this. He's a very good GDI designer.
Thanks, bro!

I could definitely create this. ?

However, I'm really busy at the moment with taking online college courses as well as creating a theme for another wonderful HF user. You can PM me if you'd like and maybe we can work something out.

Can't wait to see what you create :P

Naywyn - July 21, 2015, 8:10 am

I'll give it a try if I'm not busy. :)

Woah, woah. Take it easy.
I haven't agreed to create anything yet. ?

But we'll offer you love 4ever <3

Seriously though, this would be an amazing theme.. I would love to have it.
The one thing I hate most about coding is creating themes.

Hmmm me like

Is the tab control going to be only horizontal or vertical as well?

Naywyn - July 21, 2015, 11:26 am

Unfortunately, it'll be vertical only. :)

Cammy - July 21, 2015, 11:30 am

(Jul 21, 2015 11:26 AM)AeroRev9 Wrote: [\[CITE\]](#) Unfortunately, it'll be vertical only. :)
That wouldn't be too big of a problem. It's all for free so no complainin

idb. - July 21, 2015, 4:10 pm

If you got some money on it I could do this for you, and it will actually be done properly (inheriting the actual controls instead of the ridiculously stupid method of inheriting Control and then creating a base instance of the control you're trying to remake and implementing 1% of it's functionality). Just saying.

Hawk HF - July 21, 2015, 4:36 pm

Just saying.

Inheriting form the Control class isn't always a bad idea.

Take the Button for example. It's primary use is to be clicked. Honestly I don't know what else you would use it for. So I don't believe it hurts here to inherit from the Control class, especially since the default event of Control is the Click event.

I do agree with you for more complex controls though, such as tab controls, combo boxes, and list views.

Nice offer, though I doubt a majority of sellers on HF actually care about functionality. If their program has an attractive interface, customers will buy it.

I cringed at the fact you just called yourself a theme creator and even attempted to hint at getting paid.

[img]http://s25.postimg.org/wqv41njz/Simple_Material_Theme_SS.png[/img]

This is not a theme, this is cringe.

Ouch, my eyes. That color scheme is dreadful.

Agreed. For something like a button, it's acceptable, but at the same time not necessary because you can still just draw the button without issue. I feel like the inheriting control and creating a base instance of the control is just an unnecessary step in the process.
