Nice setup you've got going there. I would post mine but it's only a 1 monitor setup. Nothing fancy but its mine.

Its fine man, but it just gets annoying when we see the same threads a lot.

Yup, you can call it: ghetto. Because that is what it is.

Believe it or not, its not unstable. It works ok.

Spoiler ([Click to View](#))

I need a new desk.. I've had it (I should say them) since middle school and I'm 20 years old now.

PC Specs: AMD-6300, Radeon R9 270X, 8GB RAM, ect.. Nothing special. Upgrading to a \$1,700 build soon.

Monitors: Some random ASUS and an HP monitor back from when Vista came out.

Mouse: Razor Naga Hex (I'd never recommend buying one)

Keyboard: Corsair Vengeance K70 Cherry MX Browns

Headset: Astro A40 2011 Edition. Had them since Dec 2010 and they're still going strong. I might upgrade them soon just for the 7.1 surround sound over the 5.0 I have now.

Xbox One that pretty much works as a coaster at this point.

Looks pretty good to me. Got the same mouse pad as me hehe
