Thread: [Looking for a co-admim for my mmorpg python based](#)

(i)(c)(u)(r)(u)(o)(k) - July 24, 2015, 3:39 pm

The thread can be found here

<https://hackforums.net/showthread.php?tid=4920422>

I am looking for a knowledgable user on python and java..

I already have a very nice map/mob/npc editor and can admin/mod/edit the games database live..

I just need a co-admin user interested in allowing the game to have more database functions and such..

Wow. Did you code that yourself? It looks pretty awesome.

I'd help you if it wasn't a requirement to be online 20+ hours.

Out of curiosity though, what Python libraries and technologies are you using?

(i)(c)(u)(r)(u)(o)(k) - July 24, 2015, 4:11 pm

No its open source python but its not easy to setup the servers required.

I had to compile from source and add unknown libraries to the source also remove a few things to get it to run without any issues.

I can edit and mod the map/npc/wep/xp/ all this with a nice map editor and database manager..

I just need a co-admin that can help me to edit the games python/java files to add more functions in the game.

Its ok if you are not online 20± hours a week. Give that you are a good python/java coder.

Looks like a fun game. Rekt some rats. Took on a level 1 crab. Ran away as the crab kicked my ass. Crab followed. Climbed up ladder, thinking I was safe. Crab climbed up ladder after me. RIP me.

10/10 would play again.

I haven't used Python or Java a lot (I have coded in them though), but I would be glad to help.

Oh right. I realized this was coded by Mozilla.

Well, anyway, I can code in Python very well and have about 4 years experience with it, but I do not know much Java...

its browserquest modified and edited by me a bit so that I could get it to run on a windows system without issues.

It uses many java node plugins and runs off a redis database.. Really its more java than python.
