Thread: [\[Open Source\] WPF Modern Flat Theme - Beta](#)

SIM-1725686 - July 24, 2015, 7:24 pm

Hi, everyone. I was getting bored a few days ago, and decided to make this little project. Basically, it's a WPF theme that lets you create modern-looking programs with no hassle whatsoever. You can't resize the windows right now, but if enough people like it that I can further this project, that will be the first change I implement.

It's open source: <https://github.com/UniversalFuture/wpf-modern-flat>

So feel free to contribute if you want.

There are some cool things this theme includes that you might consider making use of: Cool buttons, woohoo!

Colors from Flat UI

Flat textboxes and tabitems support LeftContent and RightContent, which allows you to easily add additional functionality to your controls without stressing over extra code

It's customizable, so you can easily change what you don't like

Buttons and textboxes have a Bootstrap-like type attribute, which enables them to be quickly and consistently colored

Here are some screenshots:

Spoiler [\(Click to View\)](#)

Buttons are always cool. You can see the use of the "Type" attribute to color them.

Textboxes that can also be easily colored. You can apply a fixed width/height to them, otherwise they automatically grow to wrap content.

A simple, Awesomium-based web browser using WPF Modern Flat. This should give you an idea of the possibilities with flat buttons, which can also be given transparent backgrounds. It also is a good example of using the LeftContent and RightContent properties on a FlatTextbox to add extra functionality to the textbox, in this case, the search and refresh/stop buttons.

Usage (IMPORTANT):

When you want to use this theme, you should reference Global.xaml within your window, and bind your window's Style property to FlatWindowStyle. I know, it's a bit tedious to manually set the window's style, but whatever. We can fix that later if it's too hard. Your window should be a

WpfModernFlat.Controls.FlatWindow, of course. If you use the FlatWindow without the style, you'll end up with a window with a black pit where there should be controls.

Anyways, feel free to use it in your projects, or to modify it. I would certainly appreciate any feedback, as I will probably use and expand it in the future, and I want it to become the best it possibly can be. Thanks in advance.

Nice theme, too bad I only know of 2 people in this section that actually use WPF
1 of which is no longer with us

SIM-1847363 - July 24, 2015, 11:02 pm

Looks nice, wouldn't be hard to replicated it in GDI. Overall looks nice might want to fix yo button tho.

ninen2001 - July 25, 2015, 12:10 am

Pretty cool! Good job. Maybe not my style but still pretty cool in general.

Rhez - July 25, 2015, 5:58 am

Nice try bro. Its good to see someone is having a good time with WPF.
Keep it up !

Thank you, and yeah, I honestly have no idea how to fix that. I'm thinking to add another Trigger to expand the color margin within the border to hide the clipping.

en3rgizz - August 3, 2015, 12:49 am

Thank you for the theme, This theme is really beautiful

tweety - August 3, 2015, 8:44 am

Nice to see some WPF around here, nice work OP.

Vaxorr - August 3, 2015, 5:12 pm

This is sexy af OP, nice job. Will definitely use it in the future.
