Hey guys,

I recently made a site for Bitcoin Jackpot i will explain how this works below.

1. Sign up an account.
2. Enter a nickname & your BTC address.
3. Deposit bitcoin to your account (0.0051 recommended).
4. Queue a wallet (0.0050 min) to a raffle the higher amount you queue the more chance of winning.
5. Every 5 wallets the raffle results will be drawn displaying the winner.
6. You will be sent an email confirming your win.

I'd say that 0.02 BTC is a kinda high, specially for new websites, if you want to get more traffic you can lower it as people tend to go with smaller amounts.

GL with your website.

its around \$5, which seems ok since no one is going to gamble unless there is a decent amount of money in the pot

But at the same time it's high amount comparing to 30 bits that can be used on satoshimines, your website doesn't have a time for the profit, so maybe someone will buy and wait a whole day to get paid, most people wouldn't want this happening.

I agree, you need a holding system like satmines, so you can hold say 1 btc but play as small as you want into the pot for each round.

This site is easy exploitable. Simply create 4 accounts with a bunch of BTC in all of them than enter.

Which will lead to a gurenteed win.

How would this be exploiting? you would just win back the money you entered on the 4 accounts?

Update: also just added something to try and avoid multiple accounts.

If you were to do some sort of fee you could do the house get 1% of raffle tickets free lol !!

We do a fee on each draw depending on the jackpot value we can take 1 - 4% max, standard is 2%.

I've added 0.0300 to the jackpot and also lowered the minimum amount to 0.0050 BTC to queue a wallet.
