Thread: [Chuck Norris Joke Generator](#)

Uzi London ++ - July 26, 2015, 5:35 am

I got bored.

Idk why, but the theme I used got fucked up halfway through and I couldn't change the groupbox. I'm too tired and just woke up so I didn't feel like trying to fix it. Have fun with your chuck norris jokes :D now you can be a real mlg with quick Chuck Norris jokes. glhf

[Download sauce + bin.](#)

Wtf I totally changed Form1 to "Chuck Norris Joke Generator. Whatever. Kek. GETTING coffee now ;D

Oh. And I know it can be optimized. Once again, I just got bored and I just woke up. Optimize it if you like, it's like 2 lines of code :P

(Jul 26, 2015 05:35 AM)Johntheawe Wrote: [\[CITE\]](#) Optimize it if you like, it's like 2 lines of code :P Well, if you absolutely insist...

```
Code Private Function GetJoke(joke As JokeType) As String
    Using wc As New WebClient
        Return wc.DownloadString("http://api.predator.wtf/joke/?arguments=" & joke.ToString())
    End Using
End Function
```

```
Public Enum JokeType
    nerdy
    explicit
End Enum
```

Edit- Some suggestions:

- You've already imported your namespaces, why continue to qualify them?
- Remember to dispose your requests, responses and streams. Wrap in Using blocks.
- You're mixing between title case and camel case, always the latter for local.
- No use in catching the exception if you're going to do nothing with it.
- Parenthesize methods.

I won't pick up on the Dispose call.

Public Enum JokeType

nerdy

explicit

End Enum

I won't pick up on the Dispose call.

I'm sorry. Please don't hit me :<

moosa666 - July 28, 2015, 4:20 am

awsome now i can use a lion to click the mouse like chuck noris

Hey, you should keep naming conventions in enums as well

So capitalize those fuckers, and call tolower()
