Thread: [Java RAT Tool that supports Bitcoin Mining and Best Java RAT Tool?](#)

AnonLeaks - July 27, 2015, 10:24 pm

So the reason why I'm looking for a Java rat tool is because all the non Java rats get detected once finished and built e.g (Rat.exe) so even with AV and with a crypt. As the file is*FUD* and you infect all your clients....Like two weeks later it will get detected because the crypt is no longer FUD and all them are gone, but anyway that was just my option on that. But I was looking for the best Java rat because I think they are more FUD then the others. Then I seen OSCelestial RAT and thought it was great the only problem is it didn't have Bitcoin mining tool to spread to clients anyone have this kind of tool on their Java Rat?

Maybe plugins in a Java RAT?

Thank for reading and the help?

You're probably right its just a bit more hassle when doing that thats all but its a lot easier with the a built in one. Also leads be to the same question whats the best one and stable Java Rat?

btw getting of now really late in UK 6AM...LOL?

OSCelestial RAT is coded in Java, and works on multiple operating systems like Linux,Windows, and Mac. You can control all of these using OSC RAT. It is 100% FUD (always), so no crypter is needed. It is highly stable and I suggest it if you plan on accessing many different OS.

It is updated very frequently as well.

Find it here: <https://hackforums.net/showthread.php?tid=4791575>

Agreed this is the best rat for the job, but does not cover OPs primary thought of BTC mining.

TBH, not 100% sure I heard of any Java based BTC miner come to think of it. I hope you dont plan on mining cell phones ?

Not anymore buddy.

Its dead now.

The owner of OSC has not been online in over a month, you should find another RAT to recommend.

If you're going for multiplatform functionality. then try out NetWire

If you still insist on a Java RAT, I'd say PiRAT or jRAT free. OSC and jSpy is dead
