Thread: [\[VB.NET\]Simple Dork Search](#)

JoshuaSmith - July 29, 2015, 5:11 pm

I made this awhile ago and i have really released anything here so i thought i'll start off by releasing some simple stuff for new comers to learn from.

About:

This program uses Google api to search for dorks and return them to a listbox. it also has a links to sqlmap and python for 32 and 64 bit.

since it some pcs are 32/64 bit i made a check to get the pc info so the user knows what python to get.

this need .net 4.5 to run. i left the exe in the folder for you to see it with out compiling frist.

Note the api i used isn't paid for so you can only search so much in 1 day.

Picture:

Download:

I love how you put a spoiler for the picture URL. Use [img] tags next time.

Also, in the title, I believe its spelled "simple", not "smple". Could be wrong on that, though.

google dork :example: index.php?id=(this can be any number or blank)

a dork is a search sting that is used to find sites site that are similar but can be used to find sites to
sql inject.
