Thread: [TaiG stuck at 60%, phone in blue screen loop.](#)

gust9494 - July 29, 2015, 7:51 pm

Hello. I am trying to jailbreak my main phone, iPhone 6, 8.4, using TaiG and it is not working. It gets stuck at 60% and my phone just keeps getting a blue screen then restarting. Latest TaiG, running as Admin. Please help, any ideas?

I was made aware they fixed that. Have a quick look on YT, plenty of tutorials. Give it time though, mine was stuck on 60% for a good ten minutes but still did it.

I tried waiting a good 10 minutes and it just kept blue screening and restarting.

In that case just check the tutorials. I think you have to downgrade iTunes.

Is the passcode on your phone disabled?

Is Find My iPhone on? (Turn it off)

Are you running the latest version of the JB tool?

Have you tried re-installing the software?
