Thread: [Akira- old but amazing anime me film.](#)

Shiny Wolf - July 30, 2015, 1:44 am

There are certain science-fiction films, such as Blade Runner and Kubrick's 2001, that are so well realised that they can influence the genre for decades to come. Now Akira has been around for some 23 years (and is due for a Hollywood remake), we have seen how long a shadow it has cast not only over science fiction but also animation, it sits comfortably alongside those other lauded titles. Another thing it shares with them is how it always offers up something new or missed with every viewing. The plot, straightforward to some, impenetrable to others, concerns a futuristic neo-Tokyo biker gang whose lives are impacted on after an accidental collision with a secret government-run project dealing with telekinetic powers in children. Style and substance run neck and neck in this thrilling, bold landmark film that just refuses to become dated.

Please take the time to watch it because it's really a fantastic film.

I found Akira at my local used cd/dvd shop for pretty cheap. Needless to say I snatched that shit up right away. Akira is god tier and a must see for any fan or anime or sci-fi.

Reminds me, I really need to finish up reading Neuromancer.

It's like the beginning of anime. I'm gonna do threads like these to make people watch the old and good anime.

Have 3 copies of it; video, DVD, blu-ray. Worth it every single time.

Gladly - July 30, 2015, 6:07 am

Akira was an amazing movie. The detail that went into the movie was gorgeous. If you loved Akira, check out the original Ghost in the Shell movie.

Duyere - July 30, 2015, 6:27 am

I have seen Akira many times now. It truly is a great movie.

Seen that too :^)

Such good films.
