Thread is forever closed :)

JohnArab - July 30, 2015, 5:01 pm

That seems pretty good. If I had money I'd definitely buy this. Would probably run GTA V max graphics at 60 fps for a while. Good luck.

Long Morrison - July 30, 2015, 5:11 pm

It's pretty basic PC, price ain't bad.

But It won't run GTA V at max, not even close.

You could build pretty nice computer with 600\$ you know?

That is highly doubtful unfortunately.

To be able to play decent games a \$600 PC would suffice most likely.. depending on which parts you invest the most money into.

The key here is to research and find the best component for a reasonable price. You can build a really good computer for gaming that won't break your wallet too much.

Yeah as long as you stack your parts right and don't worry about a "sick" case, you can make a nice \$600 build!

Filthy Frank•??? ? - July 30, 2015, 6:31 pm

Best thing to do IMO is to save up for a beastly computer or at least start building one you can further upgrade, plan ahead. Plan what GPU you'll save up for and make sure it's compatible with

the components that you'll have when you eventually buy it.

I spent \$1700 all together for mine and it can pretty much run anything you throw at it.

webdev77 - July 30, 2015, 6:32 pm

What kind of gaming do you plan to do? What games and what settings?

TheGrayAviator - July 30, 2015, 6:42 pm

That's how I built my first PC. I would also suggest spending a bit of your time, looking for a good motherboard that you can use for a couple of years, as well as that will allow you to do upgrades along the way.

My last motherboard last me for 6 years, but I was able to do a lot of upgrades which kept my system running smoothly..

Echo419 - July 31, 2015, 7:46 am

"Good" is a subjective term. But in the case I imagine that machine would be fine for you. Even if the current tech inside needs upgraded in the future it shouldn't be too hard or expensive. Plus it's always nice to have a system out of a box and ready to go, even if you have to potentially uninstall some bloatware.

Long Morrison - July 31, 2015, 9:06 am

Here you go.

Got everything besides case and OS.

<http://pcpartpicker.com/p/3Y4fLk>

It might run GTA V pretty well ?

looks nice but the i3 tho, i need to be able to run a VM also

Breeze26509 - July 31, 2015, 9:49 am

You might as well build a PC.

Post a thread in the [Computer Overclocking, Customizing, and Hardware](#) section and they'll put something together for you.
