Thread: [Can't portforward on my router](#)

BkVinny - July 31, 2015, 5:42 am

So my router is really weird it got a port forward option but when I open the port it wont open and my firewall + antivirus is off when I do it.

Is there like any good vpn's that can portforward?
if there is plz post them here

Mr.ProVanzla - July 31, 2015, 6:22 am

do you have a try it utorrent

Durham - July 31, 2015, 6:23 am

It helped if you tell us which router you have.

Just use a VPN that has portforwarding. Then you won't need to mess with your router at all.

A good one that I used to use is VPN4ALL.

Also, with VPN4ALL you can anchor an IP so it never changes, so that simplifies things a lot.

NoMemes - July 31, 2015, 1:16 pm

Use google and figure out how to PF. So much easier.
