Thread: [Making your avatar into a circle - \[Beginners \]](#)

lenaos - July 31, 2015, 6:13 pm

Make a new Photoshop document, 120x120 .
120x150 is too high for my personal taste.

-

Find your image and important it to Photoshop (Ctrl + O).

-

Drag it into your composition that was made.

-

We have this at the moment:

-

-

Select the ellipse tool and make a new ellipse any size.

-

As such:

-

Find the free transform option (Ctrl + T) and expand your circle to fight the canvas edges.

-

As such:

-

-

Put the ellipse below your image.

-

Right click on your image and select "Create clipping mask"

-

As such:

-

-

Make the background #333333 to match HackForum's background color.

Thanks.

Thanks for this, Ren. I was actually about to make a thread asking for the HF background color!

Basic, but helpful also you could use the selection tool and invert the areas you select.

Unnecessary steps + you lose the original image unless you duplicate it.

Or just make the background transparent for unrestricted avatar

Both options work man, just stating one or the other.
