Thread: [> SCORP CODING < CODING ON YOUR LEVEL!](#)

Slachter - August 2, 2015, 2:06 am

Scorp Coding - XyNtax

Coding for beginner/advanced/intermediate

Ever wanted to make that one thing you couldn't make because there were no tutorials or you don't have the knowledge?

Well, this is your lucky day! I proudly present my new YouTube channel! I am/will (be) doing a lot of tutorials!

Not only just tutorials on how to create a program? But also coding tutorials, set-ups & more!

I'm doing weekly around 4 tutorials, depends on my time, sometimes more, sometimes less, but I try my best!

Currently I'm planning to do a Javascript series, maybe some C++ too!

I've only done some Vb.Net/C# stuff right now, with some helpful tutorials too.

Feel free to suggest me tutorials!

Wanna start learning? Go here now!

https://www.youtube.com/channel/UCKPUCcnGKXnomMiG0gw_s6A

Note: My main language is NOT english, so please apologize me if I speak weird or stuff like that.

Bumping this! Because why not.

in_training - November 10, 2015, 9:32 pm

you guys still doing this?

datguy.dev - November 12, 2015, 10:47 am

At this time, for me, it says your channel has no videos uploaded. But I watched your booter tutorial video only because it loaded on the homepage.

I dabbled my way through the video and I think your English is just fine. Good enough audio, but a lot of dead air. You could use that time to maybe speak on what a booter is and how etc. just so it's attention retaining. Tbh, I wasn't at all impressed with how you explained how to code the booter. Well because you didn't, you used an api... c'mon now. Besides that, you didn't really explain the

variables or the the I/O of the form. I don't think you should take shortcuts in tutorials. I also think you should talk to your audience like they were in the same room as you.

But props to you for getting out there. I hope you take that as constructive. Good luck.

Maybe you should concentrate on one language for now.
