Thread: [Tutorials, Resources, & How Too's](#)

Medicinal - August 2, 2015, 11:33 am

Hello HF's vb.net and .net developers!

So i am new to vb.net, and .net framework but i have everything to code in this language, what are some great tutorials, resource websites or some good how too's/snippets?

I do know some basics on vb.net, my experience is about a 2/10. I would also like to know how you guys get ideas on what to code?

I came to HF to learn from some of the best vb.net coders on the web but the down side is i have no money. I understand most code.

Thanks for your time!

Go download some sources and try improve them, you will learn as you go.

Best way to learn IMHO.

Either that or try build something and every time you run into an issue or don't understand something, read up on it until you know it.

Youtube videos are really only good for learning your first Hello World! application, after that it's pretty useless.

Tryin to make a change :-\
