Thread: [Camera crop section](#)

Cole ??? - August 3, 2015, 3:37 pm

I have a sony a7. Its full frame. My lens can be used in full frame mode or apsc crop mode. I like the angel better in crop mode. Will using it in crop mode on my full frame lower quality? (video) thanks guys.

Check that out. Mind somewhat answer your question

minimalist - August 3, 2015, 6:10 pm

No. If you crop a section of any media - a video, an image, or an audio file - the contents within your selection to keep will stay the same. However, if you enlarge/fit-to-scale, it will obviously degrade the overall quality since the pixels are being spread out.

Same as if you save it in a lossy format, an example is saving and opening a .jpeg file over and over. It will degrade. I doubt I'm reading your objectives right though.

Well, crop mode does what it says..it takes the full picture and crops the rest out, making you go from 24mp to way less. So why not just crop in post instead of when you shoot? It will keep you away from losing out on perspective.

When I film in crop I like the angle way better, in full it's just too wide angle...

Using it in crop mode will lower video quality

All depends on the lens and its focal length.

Oh, yeah, well then, I wouldn't want to shoot video on 14mm neither except for skating or something along those lines.
