You probably clicked on this because you're tired of losing all of your Miniclip 8 ball pool coins...so was I. So I made this program to cheat my way to riches!

FEATURES

- *Undetectable (Doesn't interact with the game itself)
- *Make every shot (Shows guidelines for each and every pocket)
- *Cheap

virulence - August 4, 2015, 6:53 pm

After setting up everything, I have to say that even for \$2, this is a very lackluster bot. Frankly this is more of a detriment to your game play than an actual assistant. The lines that the assistant makes are all jagged and confusing, you have to remap coordinates every time you restart, and it gives you impossible shots as part of your aim selection.

If possible, make one that provides you with a visual guideline that extends it. Like this:

It depends. Do you have the .Net framework installed on you Snow Leopard desktop? If so, you may have to reboot into Kali linux and send a deauth attack to your neighbor's wifi so your radio waves don't interfere with the program.
