Thread: [Linux Bots Or More Bots on IRC](#)

Jmunnay - August 3, 2015, 8:06 pm

I have setup my IRC Already , and yes I have 15+ Servers , Like multiple servers, the main server I host my IRC on allows spoofing and me to host it on but still can be reported for malicious I think ?

I wanna know if someone can help me get linux bots , on my IRC?
I will pay if needed ?

Add me on skype my name is : Jmunnay
or on kik : ogkingcosmic
:) Thanks in advanced.

Linux bot IRC servers rarelyyyyyy get reported as 15 "clients" isnt alot of traffic at all, which appears as a legit IRC server and not boatzys. OVH and Ecatel are fine for hosting.

I would suggest using more than 15 servers. There are many things you can do. I suggest combining multiple exploits and nix to make them work together so that way you get more power. PMA can be bad alone, but when combined with Nix it could be pretty good. It's like a little energy boost.
