Thread: [Free Crypt Service | Private Crypter | 100% FUD](#)

Datageni - August 4, 2015, 8:42 am

I'm doing a free crypting service for all L33ts and Ub3rs of the community. Please follow the format below in order to have me crypt your server.

Quote:1) Build your stub normally, but exclude these settings: File persistence
Delay execution Firewall termination
Hide file
* File bind

2) Upload your file here: <http://ge.tt>

3) Send me a private message with what features you want, along with the link to your file.

I will reply back to you once the file has been crypted. I'll run a scanner to make sure it's completely FUD and undetectable. If you have any further questions, please comment below or send me a PM. If you want to speak over Skype or XMPP, then please PM me with your username.

Cheers.

How do we know you won't bind your own sp00ky mouse to our sp00ky mouse?

I guess you just have to trust me. It's against the rules to infect another member on HF and I can get my account closed for doing such a thing. I can share my screen on Skype as well, if that makes you trust me. I have nothing to hide ?
