Thread: [Hack Pack - 0.5GB - Windows](#)

CrazyPolokHacker - August 9, 2015, 6:48 pm

The reason I'm reposting this again is because I cannot edit my original post after so much time, the download link wasn't working b/c the mediafire link was broke. Here is the post description:

"This is a pack with all sorts of hacking tools, including rats (I know Hackforums loves rats), keyloggers, Web tools, password tools, and cryptography tools. I threw this pack together for a friend who lost his tools, (Also newcomers who want to get started are more than welcome to download) so i made one with tools that seem to be useful.

However, I haven't used every program in it, except for a few. For the duration of the time that i had these tools, they've always been inside a virtual machine, and i haven't noticed any suspicious processes lingering around after opening. (I used rKill and ESET NOD AV)"

New Link:

I can't upload this to virustotal, its exceeds the 128mb limit, usually when you post a virus scan its for a single tool or two that can fit within the 128mb limit.

Any antivirus will pick up hacking software and label it a "generic trojan" or whatever else.

I advise you to run any hacking software in a virtual environment (except 100% trusted source) as I am not sure of every single source of the tools in my pack.

S1NN3Rx - August 11, 2015, 3:28 pm

Yeah, a virus scan on hacking software doesn't really make a difference.

Anyway, I vouch for this. Good tools. I'm using them fine.

CrazyPolokHacker - August 11, 2015, 5:20 pm

Thanks for feedback!?

Strayta - August 12, 2015, 4:56 am

Put up a virus scan man. Thanks.

ivadmn - August 12, 2015, 6:14 am

Virus Scan please so i be sure if its safe to download lol.

CrazyPolokHacker - August 12, 2015, 10:27 am

Hey skids please understand how virus scans work before commenting, thanks.

OP, just upload to a non-distributing scanner, if that's what you were intending (?) Also that's kind of rude, to talk to people like that on your own forum. Thanks ?

jhon9480 - August 12, 2015, 7:07 pm

I'm gonna dwload it. Thanks!

There is no scanner that takes a pack that big. Its about 430mb.

Ulamix - August 13, 2015, 11:49 am

This file contains a fuck ton of viruses.

CrazyPolokHacker - August 13, 2015, 12:23 pm

To everyone who wants the hack pack:

Sorry, but I took it down because too many people were complaining about hacking tools and viruses. I'm surprised people downloading hack tools for windows don't know what a false positive is. ???

(Also these noobs didn't know you can't upload a half of a gigabyte file to an online scanner. ?)

If you want the pack PM me for it. ?

Haantje96 - August 13, 2015, 12:30 pm

link doesnt work..... but thanks anyway

L88R - August 13, 2015, 2:15 pm

Hey dude keep up the good posts! looking forward to see what you bring next!

xgriekx - September 13, 2015, 1:24 pm

the link doent work i think the file is down

Checkmark - September 16, 2015, 8:01 pm

Virus Scan please :D Thanks!

funseeqer - September 17, 2015, 8:33 am

Yeah, file has been removed... And to all the idiots requesting a virus scan, or complaining that it contains viruses... He stated in his post that it contains R.A.Ts and keyloggers... All Antiviruses detect (or at least try to detect) those. Although, it would be more useful if they were already FUD.

Edit

It just occurred to me some people might ask for virus scan to see if anything in it WAS FUD. Although uploading to sites like virustotal are a bad way to test that since it's a good way to get the file detected.

Frankey - September 17, 2015, 8:35 am

The link isn't working anymore?

CrazyPolokHacker - September 17, 2015, 12:05 pm

I took it down because I can't put a virus scan on it.
